

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

REPORT
OF
THE SUPERINTENDENT OF THE NINTH CENSUS.

DEPARTMENT OF THE INTERIOR, CENSUS OFFICE,

November 1, 1872.

SIR: I have the honor to advise the Department of the completion of the work of the Ninth Census; and I take the occasion of the annual report, required by law to be rendered at this time, to submit the entire material for the Compendium authorized by the concurrent resolution of May 31, 1872. The extended tables, to be comprised in the quarto volumes authorized by the resolution of April 19, 1871, are in the hands of the Congressional Printer, and nearly all are in type. Both the text and the tables of the Population volume have been for some time awaiting the completion of the maps designed to illustrate this volume; and it is anticipated that bound copies will be upon the desks of members at the assembling of Congress in December. The two remaining quarto volumes are complete in the Congressional Printing Office; one of them, the volume on Vital Statistics, being in type. Of the other volume, that on the industry of the United States, about one hundred pages remain as yet untouched.

I am advised that it is probable, notwithstanding the enormous pressure on the Printing Office from the legislative matter thrown upon it in the first weeks of the session, that the last of the quarto volumes of the census will be completed early in January.

I cannot pass this point without acknowledging the advantage which this Office has derived from the manner in which its necessarily heavy demands upon the Congressional Printing Office have been met. The intelligent interest taken in the work by the Hon. A. M. Clapp, Congressional Printer, and the zeal and efficiency of his subordinate officers, have amounted to a positive re-enforcement of the Census Office. But for facilities far beyond what any Bureau officer has a right to claim, the publication of the census volumes must have been carried far over into the next year.

In the course of the census, occasion has been found but too frequently to note defects in the act of 1850, under which, notwithstanding the vast changes which the country has undergone, both in the conditions of enumeration and in the proper subjects of statistical inquiry, the census of the United States continues to be taken.

In the report rendered from this Office on the 26th of December of last year, which report is made a part of the Population volume soon to issue from the press, a full discussion was had of the general system of enumeration now in force, while the particular deficiencies in the schedules of 1850, and in the agencies provided for the collection of the material relating thereto, have been discussed in immediate connection with the individual tables of the several quarto volumes, nearly every important table being prefaced by a body of remarks in which are set forth the errors known or suspected to exist therein, with such explanations as could be afforded of the reason of such errors, whether it be found in the nature of the subject, in the scheme of inquiry, or in the machinery created for the purpose by the act of 1850. The limits of a Compendium will not allow of the reproduction of these remarks at length, nor could they generally be abridged to advantage. It has, therefore, been deemed desirable to accompany the tables of the present publication with references to the extended tables on the same subjects, and the discussions relating thereto, in the several quarto volumes, so that those who have occasion to use the statistics of the census for purposes requiring great exactness of detail and nicety of treatment, may be assisted to consult the fuller reports at libraries and public offices, should they not be personally in possession of them.

The appropriation of \$25,000 made at the last session of Congress for preparing and publishing maps for illustrating the quarto volumes of the census, has been expended with results which it is believed will meet the hearty approval of Congress and the country. The greater portion of the maps printed under this appropriation were prepared at the Census Office, out of its own material. For the purpose, however, of illustrating more completely the sanitary and industrial conditions of the country, certain other maps have been prepared, in respect to which the Census Office has been the recipient of favors from individuals and institutions, whose names and titles the Superintendent feels it a high honor to be allowed to associate with his work. To that eminent and venerable scholar, Professor Joseph Henry, Secretary of the Smithsonian Institution, and to Professor Charles A. Schott, of the Coast Survey Office, acknowledgment is due for maps showing, severally, the annual distribution of rain and the courses of the lines of equal temperature; charts eloquent with instruction upon the agricultural capabilities of the country and the conditions of human life among us. Professor A. Guyot, of Princeton College, through his publishers, Messrs. Scribner, Welford & Co., of New York, kindly placed at the disposal of this Office the plates of his valuable physical map of the country, to which Professor Schott has, with the permission of the Superintendent of the United States Coast Survey, added by far the most complete and accurate series of elevations yet attained. These three maps have been used to illustrate the volume on Vital Statistics.

Professor Charles H. Hitchcock, of Dartmouth College, assisted by

Professor William P. Blake, of New Haven, has prepared a geological map, to be found in the volume on Industry, upon which are laid down eight principal formations, with a comprehensiveness, a precision, and a degree of detail never before attempted in the geological description of the United States. All the work thus kindly contributed to the publications of the census has been reproduced in the best style of the engraving art, and the Superintendent can feel no hesitation in claiming for the results the highest value, both in popular instruction and in the positive increase of scientific knowledge.

Of the maps prepared at the Census Office, seven have been assigned to the illustration of the Population volume, four to the volume on Vital Statistics, and four to the volume on Industry. Most of these maps are double, presenting two distinct subjects, generally selected for purposes of direct contrast. The maps in the Population volume exhibit the density of total population; the distribution severally of the colored and the foreign elements of population; the dispersion over the States of the natives of certain specified foreign countries, viz: Germany, Ireland, Sweden and Norway, England and Wales, China, and British America; the illiteracy and the wealth of each section in contrast; and, finally, the geographical and political divisions of the United States at each period of its existence, from the organization of the Government to the latest census year.

The maps illustrative of the volume on Vital Statistics show the range, and, within the range, the degree of prevalence of four specific diseases, or groups of diseases, viz: 1st, consumption; 2d, typhoid, typhus, and enteric fevers; 3d, malarial diseases; 4th, dysentery, diarrhea, and enteritis.

The maps illustrative of the volume on Industry exhibit the range and degree of cultivation of five principal crops, viz: cotton, corn, wheat, hay, and tobacco, and also the dairy products of each State and section.

The possibilities of this style of illustration are practically without limit. The present, as the first attempt of the kind in the United States, may be found to contain faults of treatment in some particulars; but it is not doubted that this will hereafter be an essential part of the census report. A thousand persons will thus obtain, without effort, just and vivid impressions in respect to the most important features of their country, physically, socially, and industrially, where one will, by long and painful study of the tables of the census, create such a series of pictures in his own mind.

The cordiality with which the press and the country have recognized the early publication of the prime results of the census has afforded ample compensation to the Superintendent for all the effort that has been required to accomplish the completion of the work of compilation within two years from the conclusion of the enumeration. There is no reason, however, why, with such modifications of existing laws as would insure that the material should come originally to the Census Office in proper

shape for tabulation, the entire compilation should not be concluded within a year from the date of the first receipt of returns. It is not possible for one who has had such painful occasion as the present Superintendent to observe the workings of the census law of 1850, to characterize it otherwise than as clumsy, antiquated, and barbarous. The machinery it provides is as unfit for use in the census of the United States, in this day of advanced statistical science, as the smooth-bore, muzzle-loading "Queen's-arm" of the Revolution would be for service against the repeating-rifle of the present time. It ought not to be possible that another census should be taken under this law: such a thing ought not to be seriously proposed. The country has suffered more than enough already of discredit and of loss on account of the wretched insufficiency and inappropriateness of the provisions of this ill-constructed and outgrown statute.

I do earnestly recommend that the attention of Congress be especially invited to the propriety and expediency of an intermediate census, to be taken in 1875, in preparation for the approaching centennial celebration of the political birth of the nation. A census of the United States taken under a system and with a management which would secure the publication of the results by the 1st of June, 1876, would be a noble monument to erect at the end of a century of the nation's life. It would mark off the first grand stage in an industrial and social progress altogether unprecedented in history, and serve as the starting-point of a fresh career which we have, under Providence, reason to believe shall be greater and happier yet.

Another consideration, which strongly influences me in this recommendation, is the belief that a census in 1875 would secure the taking of the Federal census thereafter at intervals of five years only. The interval of ten years fixed by the Constitution has been found to be far too long for all the uses to which the statistics of the census are put, except only for the redistribution of congressional representation.

So rapid are the internal changes of the country, oftentimes setting calculation at naught, so fierce and vast the growth of the nation as a whole, that the hiatus in the statistical information at the command of the legislator, the pamphleteer, the journalist, and the social and political philosopher, becomes positively painful five or six years after the date of the census. Whoever will call to mind the estimates as to the population and wealth of cities, States, and sections which immediately before the occurrence of the last census were popularly put forth, were made the material of political and industrial speculation, and were even taken as the basis of State and national legislation, will hardly be disposed to question that the cost of a census once in five years would be amply repaid by the light it would shed upon the condition of the people and the progress of the nation in population and wealth. Were the country once to learn by practical experience the advantages of a quin-

quennial enumeration, it is not likely that a longer period would ever thereafter be allowed to intervene between the Federal censuses.

In the report rendered from this Office December 26, 1871, mention was made by name of several gentlemen connected with the Office, to whom acknowledgments were due for highly meritorious services. In closing the work of the Ninth Census, it is now my pleasant duty to publicly recognize the zeal and activity of George D. Harrington, esq., the chief clerk of the Bureau, and the intelligent and spirited co-operation of Messrs. Henry Stone, C. S. Mixter, and S. A. Galpin. More than a formal acknowledgment is due from me to Mr. S. W. Stocking, the chief of the Division of Results, from whose hands has gone to press every page of the census reports of 1870. A projector by nature, of large resource and indefinite capacity for work, he has proved a most valuable assistant in devising the forms and methods of compilation and of publication. The first clerk appointed at my instance, after my own appointment as Superintendent, in February, 1870, I respectfully recommend him to you as a person eminently qualified to discharge the duties of census clerk of the Interior Department during the interval between the Ninth and the Tenth Census.

Mr. A. S. Boernstein has "cast" nearly every table of the present census, and has superintended the reading of the proof. One of the most capable printers in the United States, an artist in his craft, the typographical excellence of the series of volumes of which this now submitted is the last, has been in no small measure due to his industry and taste.

To yourself, honored sir, I have again to tender heartfelt thanks for generous and cordial support in the duties of my office.

Very respectfully, your obedient servant,

FRANCIS A. WALKER,

Superintendent.

Hon. COLUMBUS DELANO,

Secretary of the Interior.

TREATMENT OF INDIANS IN THE CENSUS.

[Extract from report of the Superintendent, in Vol. I, Ninth Census.]

Indians taxed.—In the absence of any constitutional, legal, or judicial definition of the phrase "Indians not taxed," as found in the Constitution and in the census law of 1850, it has been held for census purposes to apply only to Indians maintaining their tribal relations and living upon Government reservations.

The broken bands and the scattered remnants of tribes still to be found in many States of the Union, though generally in a condition of pauperism, have been included in the enumeration of the people. By the fact of breaking away from their tribal relations, they are regarded as having entered the body of citizens and as subject to taxation, from the point of view of the Constitution, although they may be exempted actually from taxation by local legislation or by the accident of pauperism. It has been held that it was not necessary that a member of this race should be proved to have actually paid taxes, in order to take him out of the class "Indians not taxed," but only that he should be found in a position, so far as the authorities or agents of the census can know, to be taxed were he in possession of property. His pauperism has been regarded as an individual accident, which cannot possibly affect his constitutional relations. Even where the lands formerly belonging to a tribe have been granted in severalty, without the right of alienation or sale, and the land itself exempted from taxation, such special provisions have been regarded rather as an exception to ordinary legislation in respect to personal rights and personal obligations, made in the interest of the community, than as creating a class to be excluded from the enumeration of the people. The provisions of the Constitution in regard to the enumeration of Indians, being invidious, and opposed to the general spirit of that instrument, and even more emphatically opposed to the spirit of recent legislation and of the late constitutional amendments, should be construed strictly and not liberally.

In 1860 the same principle appears to have been applied in determining the representative population of the States. Reference to pages 598 and 599 of the Population volume of the Eighth Census will show that all the Indians embraced in the table of General Population were included in the representative population of their respective States, except for the State of California.

The reason for excluding Indians in making up the representative population of California was undoubtedly found in the fact that in 1860 the Indians of that State were mainly upon Government reservations, some of which have since been abolished. There appears no longer to be any reason for treating the State of California exceptionally in respect to the Indians found upon its territory. To have made the treatment of this class at the census of 1860 consistent throughout, the 17,798 Indians of California should not have been included at all in the statements of constitutional population.

The number of Indians in each State returned under this construction, as forming a part of the constitutional population, is found in the table on the preceding page.

Half-breeds.—Another question seriously affecting the return of Indians in the census is the treatment of half-breeds, in which term persons with any perceptible trace of Indian blood, whether mixed with white or with negro stock, are popularly included. How shall these be treated? Shall they be regarded as following the condition of the father or of the mother? Or, again, shall they be classified with respect to the superior or to the inferior blood? When it is considered how few of pure Indian race are to be found outside of Government reservations, and how variously mixed are even the camps and settlements, popularly known as Indian, in the older States of the Union, it will be seen that the decision of the question must affect, in an important degree, the numbers of this class to be returned in the census.

It has been held that, in treating this question, the Census Office is not to be concluded or in the least constrained by analogy from laws or judicial decisions relating to the former slave population of the country. The rule that the child should follow the condition of the mother was the bad necessity of a bad cause, which required every point to be construed against freedom. Something very nearly opposed to this would seem to be in accordance with the present spirit of our laws, as well as to be the dictate of common sense. The principle which has governed in the classification of persons of part Indian blood in the present census has been as follows: Where persons reported as "half-breeds" are found residing with whites, adopting their habits of life and methods of industry, such persons are to be treated as belonging to the white population. Where, on the other hand, they are found in communities composed wholly or mainly of Indians, the opposite construction is taken. In a word, in the equilibrium produced by the equal division of blood, the habits, tastes, and associations of the half-breed are allowed to determine his gravitation to the one class or the other. It is believed that this is at once the most logical and the least cumbersome treatment of the subject, in the manifest inexpediency of attempting to trace and record all the varieties of this race, especially considering the small and fast-decreasing numbers in which it is found within the States of the Union. [For the treatment of Indians other than taxed, see page 22.]

NOTE TO THE TABLE OF TRUE POPULATION. (Page 20.)

(From the report of the Superintendent, in Vol. I, Ninth Census.)

The Territories.—The Constitution, as a matter of course, contains no requirement for any enumeration of persons outside the *States* of the Union. The census law of 1850, however, makes provision for enumerating the inhabitants of the several Territories upon the same terms as the inhabitants of the States; and such enumeration has been made in connection with the Ninth Census. The results will be found in detail in the other tables of the present volume, and in the aggregate, as well as with certain distinctions of race and color, in the preceding table.

Alaska.—No special provision of law exists for any enumeration within the newly acquired district of Alaska; nor was it found practicable to organize the census service there under the general powers conferred by the act of 1850, or as an incident to the operations of the Treasury or the War Departments. In order, however, to present the statistics of the true population of the country formally complete, that district has been included in the table preceding the population of the several classes, being there stated according to the best available data, consisting mainly of reports, nominal lists, &c., from officers of the Army on duty in that military department.

Indians not taxed.—It is to be regretted that the census law of 1850, while extending the enumeration required by the Constitution to the inhabitants of the Territories, should have followed the narrower rule of that instrument in respect to the Indian population. The phrase of the Constitution, "Indians not taxed," seems to have been adopted by the framers of the census law as a matter of course. Now, the fact that the Constitution excludes from the basis of representation "Indians not taxed," affords no possible reason why, in a census which is on its face taken with equal reference to statistical as to political interests, such persons should be excluded from the population of the country. They should, of course, appear separately, so that the provisions of the Constitution in regard to the apportionment of Representatives may be carried out; but they should appear, nevertheless, as a constituent part of the population of the country, viewed in the light of all social, economical, and moral principles. An Indian not taxed should, to put it upon the lowest possible ground, be reported in the census just as truly as the vagabond or pauper of the white or the colored race. The fact that he sustains a vague political relation is no reason why he should not be recognized as a human being by a census which counts even the cattle and horses of the country. The practical exclusion of Indians from the census creates a hiatus which is wholly unnecessary, and which goes to impair that completeness which affords a great part of the satisfaction of any statistical work. With a view, therefore, to reaching the true population of the country as nearly as is practicable, in the absence of distinct authority for the appointment of assistant marshals to enumerate the several tribes and bands of Indians, inquiries were conducted extensively through the agents of the Indian Office during the year 1870, the result of which, it is believed, has been to secure a closer approximation to the true numbers of this class of the population than has ever before been effected. [By the same agency the population of the Indian Country was ascertained.]

The preceding table, therefore, in which these several elements, omitted from the enumeration, are made to appear, presents the ultimate facts of the population of the United States, so far as it is possible to

reach them by all the agencies directly or indirectly at the command of the authorities of the census. In this table, however, no attempt has been made to allow for omissions occurring in the enumeration of the classes of persons recognized by the census law and embraced on the schedule of inhabitants. It is one of the faults of the present system that not only will such omissions occur, but they occur so erratically and irrationally as to make it impossible to reach anything like a satisfactory estimate of their extent, or their distribution between classes of the population or sections of the country.

(a) Including 33 Japanese.

(d) In 1863 Alpine from Amador, Calaveras, El Dorado, and Mono.

(e) The returns of 1850 for Contra Costa and Santa Clara were lost on the way to the Census Office, and those for San Francisco were destroyed by fire. The corrected State census of 1852 gives the population of these three counties as follows: Contra Costa, 2,786; San Francisco, 36,154; and Santa Clara, 6,784; and gives the total population of the State (save El Dorado, not returned) at 215,192. El Dorado was estimated at 40,000, which would make the total probable population at that date 255,192. (Vide Doc. No. 14, Appendix to Senate Journal, 4th session legislature of California.)

(f) Including 23 Japanese.

(g) In 1885 organized.

(a) It will be observed that the several classes of New Castle County (white, free colored, and slave) exceed the total of the county here given by 2. The error comes from the original return of the marshal in respect to this county. It is impossible to ascertain, by reference to any printed or written document, whether the error is in the items or the totals. The totals of the county and of the State

(a) In the Census Report of 1850, the white and free colored population of Alexander County was published as of Anson County, and *vice versa*.

(b) Since 1860 Daro from Currituck, Hyde, and Tyrrell.

(c) In 1861 Transylvania from Henderson and Yancey.

(d) In Table II, of Volume I of the Ninth Census, the aggregates of Perquimans and Person Counties for the census of 1840 are transposed.

TABLE IX.—Population of Minor Civil Divisions, with General Nativity and Race—ALABAMA.

NOTE.—The marginal column marks beats, precincts, or land-surveyed townships; the first indication, cities; the second, towns. Names of towns are placed under the names of the precincts or beats in which they are respectively situated. The population of each beat or precinct includes that of all towns situated in it.

TABLE IX.—Population of Minor Civil Divisions, &c.—CALIFORNIA.

NOTE.—The marginal column marks townships or supervisor's districts, precincts, and land-survey townships; the first indentation, cities; the second, towns. Names of towns are placed under the names of the townships or supervisor's districts, precincts, and land-survey townships in which they are respectively situated. The population of each township or supervisor's district, precinct, and land-survey township, includes that of all towns situated in it.

TABLE IX.—Population of Minor Civil Divisions, &c.—FLORIDA.

NOTE.—The marginal column marks precincts, which in some counties were returned according to their former boundaries. In other counties the names in the marginal column are only names of polling places around which voters and their families have been grouped. The first indentation marks cities; the second towns. Names of towns are placed under the names of the precincts in which they are respectively situated. The population of each precinct includes that of all towns situated in it.

TABLE IX.—Population of Minor Civil Divisions, &c.—ILLINOIS.

NOTE.—The marginal column marks townships, precincts, and land-survey townships; the first indentation, cities; the second, towns. Names of towns are placed under the name of the township, precinct, or land-survey township in which they are respectively situated. The population of each township, precinct, or land-survey township includes that of all towns situated in it.

(d) Exclusive of city of El Paso.

TABLE IX.—Population of Minor Civil Divisions, &c.—INDIANA.

NOTE.—The marginal column marks townships; the first indentation, cities; the second, towns. Names of towns are placed under the names of the townships in which they are respectively situated. The population of each township includes that of all towns situated in it.

TABLE IX.—Population of Minor Civil Divisions, &c.—KANSAS.

NOTE.—The marginal column marks townships and land-survey townships; the first indentation, cities; the second, towns. Names of towns are placed under the names of the townships or land-survey townships in which they are respectively situated. The population of each township or land-survey township includes that of all towns situated in it.

TABLE IX.—Population of Minor Civil Divisions, &c.—KENTUCKY.

NOTE.—The marginal column marks precincts, or election districts, whose numbers are official; the names are those in general use. The first indentation marks cities; the second towns. Names of towns are placed under the names of the precincts or election districts in which they are respectively situated. The population of each precinct or election district includes that of all towns situated in it.

TABLE IX.—Population of Minor Civil Divisions, &c.—LOUISIANA.

NOTE.—The marginal column marks wards, whose numbers are official; the names are those in general use. The first indentation marks cities; the second, towns. Names of towns are placed under the names of the wards in which they are respectively situated. The population of each ward includes that of all towns situated in it.

TABLE IX.—Population of Minor Civil Divisions, &c.—MAINE.

NOTE.—The marginal column marks towns, unless otherwise designated; the first indentation, cities; the second, villages. Names of villages are placed under the names of the towns in which they are respectively situated. The population of each town includes that of all villages situated in it.

TABLE IX.—Population of Minor Civil Divisions, &c.—*MARYLAND*.

NOTE.—The marginal column marks election districts, whose numbers are official; the names are those in general use. The first indentation marks cities; the second, towns. Names of towns are placed under the names of the election districts in which they are respectively situated. The population of each election district includes that of all towns situated in it.

TABLE IX.—Population of Minor Civil Divisions, &c.—MINNESOTA.

NOTE.—The marginal column marks townships and land-survey townships; the first indentation, cities; the second, towns. Names of towns are placed under the names of the townships or land-survey townships in which they are respectively situated. The population of each township or land-survey township includes that of all towns situated in it.

TABLE IX.—Population of Minor Civil Divisions, &c.—MISSISSIPPI.

NOTE.—The marginal column marks beats, districts, precincts, or land-survey townships; the first indentation, cities; the second, towns. Names of towns are placed under the names of the civil divisions of the county in which they are respectively situated. The population of each beat, district, precinct, or land-survey township includes that of all towns situated in it.

(*) Incomplete; the other principal civil divisions were not separately returned.

(a) Also 9 Indiana.

TABLE IX.—Population of Minor Civil Divisions, &c.—MISSOURI.

NOTE.—The marginal column marks townships or land-survey townships; the first indentation, cities; the second, towns. Names of towns are placed under the names of the townships or land-survey townships in which they are respectively situated. The population of each township or land-survey township includes that of all towns situated in it.

TABLE IX.—Population of Minor Civil Divisions, &c.—NEW MEXICO.

NOTE.—The marginal column marks precincts; the first indentation, cities; the second, all other localities, whose names are placed under the names of the precincts in which they are respectively situated. The population of each precinct includes that of all localities situated in it. Wherever in a minor locality the items fail to make the total, there the deficiency represents the Indians.

TABLE IX.—Population of Minor Civil Divisions, &c.—NEW MEXICO.

NOTE.—The marginal column marks precincts; the first indentation, cities; the second, all other localities, whose names are placed under the names of the precincts in which they are respectively situated. The population of each precinct includes that of all localities situated in it. Wherever in a minor locality the items fail to make the total, there the deficiency represents the Indians.

TABLE IX.—Population of Minor Civil Divisions, &c.—NORTH CAROLINA.

NOTE.—The marginal column marks townships, their names and numbers being official; the first indentation, cities; the second, towns. Names of towns are placed under the names of the townships in which they are respectively situated. The population of each township includes that of all towns situated in it.

TABLE IX.—Population of Minor Civil Divisions, &c.—TENNESSEE.

NOTE.—The marginal column marks civil districts. Their numbers are official; their names are those in general use. The first indentation marks cities; the second, towns. Names of towns are placed under the names of the civil districts in which they are respectively situated. The population of each civil district includes that of all towns situated in it.

TABLE IX.—Population of Minor Civil Divisions, &c.—UTAH.

NOTE.—The marginal column marks precincts; the first indentation, cities; the second, all other localities, whose names are placed under the names of the precincts in which they are respectively situated. The population of each precinct includes that of all localities situated in it. Whenever the items of any locality fail to make the total, the deficiency represents the Chinese and Indians.

(b) Mason County: Arcadia also includes 1 Chinese and 2 Indians; Sherwood's Mills, 1 Indian; Union City, 5 Indians.

(c) Pacific County: Oysterville also includes 3 Chinese and 7 Indians.

(d) Sebastian County: Precinct also includes 20 Indians; Stallquamish, 3 Chinese and 45 Indians.

(e) Returned without name.

(f) Stevens County: Fort Colville also includes 41 Chinese and 95 Indians; Spokane Plain, (village,) 1 Chinese and 17 Indians; Union Flat, 13 Indians.

(g) Thurston County: Grand Mound also includes 1 Indian; Olympia, 18 Chinese and 3 Indians; Tumwater, (precinct,) 1 Chinese and 1 Indian; Tumwater, (village,) 1 Chinese; Yelm, 2 Indians.

(h) Walla-Walla County: Frenchtown also includes 3 Chinese and 53 Indians; Waitsburg, 6 Chinese and 3 Indians; Waitsburg, (village,) 3 Chinese; Walla-Walla, 33 Chinese and 17 Indians; Walla-Walla, (village,) 30 Chinese and 8 Indians.

(i) Whatcom County: Fidalgo also includes 17 Indians; Samish, 9 Indians; Skagit, 1 Chinese and 11 Indians; Swinimish, 2 Indians; Whatcom, 20 Chinese and 23 Indians.

(j) The disputed islands, (so styled on the return of the assistant marshal:) Blakeley Island also includes 1 Indian; Decatur Island, 1 Indian; Henry's Island, 1 Indian; Lopez Island, 7 Indians; Orcas Island, 23 Indians; San Juan Island, 2 Chinese and 34 Indians; Shaw's Island, 1 Indian; Spieden Island, 1 Indian; Stuart's Island, 1 Indian; Waldron Island, 2 Indians.

(k) Pursuant to an arrangement between the authorities of the United States and those of her Britannic Majesty, entered into in November, 1859, a temporary joint military occupation of the Island of San Juan was agreed to. This occupation still exists. Consequently, in the enumeration of the inhabitants of that island, both citizens of the United States and British subjects are included. San Juan Island, as here given, includes all the population of the island except the British garrison.

TABLE IX.—*Population of Minor Civil Divisions, &c.—WEST VIRGINIA.*

NOTE.—The marginal column marks townships; the first indentation, cities; the second, towns. Names of towns are placed under the names of the townships in which they are respectively situated. The population of each township includes that of all towns situated in it.

NOTE.—Of the sums contained in the four columns in order, respectively, fourth, fifth, sixth, and seventh, in this table, that in the seventh is invariably the smallest, and that in the fourth invariably the largest. The sum given in column five may be larger or smaller than that in column six, according to circumstances. It happens to be larger in the case of every State, and of each of the Territories except Arizona and Utah, (in the latter case for obvious reasons.) The mathematical proof of column

four is by adding columns five and six, and subtracting column seven. The difference between column five and column seven yields the number having foreign fathers but native mothers. The difference between column six and column seven yields the number having foreign mothers but native fathers.

* At 1860 and 1850 the nativity of the slaves was not ascertained. In this table they are assumed to have been native.

TABLE XI.—Native Population, distributed according to State (or Territory) of Birth—1870.

(a) At the re-enumerations of the cities of New York and Philadelphia, no return was made in the columns for "School attendance" and "Illiteracy." Consequently these compilations were made from the schedules of the first enumerations, and represent the facts for an aggregate population of 923,914 for the city of New York, and of 657,437 for Philadelphia.

(b) Also 9 Indians and 12 Chinese.

(c) Including 1 Chinese and 4 Indians.

(d) Including 42 Chinese and 16 Indians.

(e) Also 1 Chinese.

(f) Also 7 Indians.

(g) Also 1 Indian.

SCHOOLS, LIBRARIES, NEWSPAPERS,
AND
CHURCHES.

SCHOOL ATTENDANCE AS EXHIBITED IN TABLES XXI AND XXVIII.

It might be thought that the school attendance stated in the following table should agree precisely with the school attendance exhibited in Table XXI of this volume. A comparison, however, will develop differences often very considerable in the case of nearly all the States and Territories, while a consideration of the character of each table will explain and justify such discrepancies. The returns from which Table XXI is made up are individual. The returns from which the following table is made up are institutional. Table XXI shows the aggregate number of persons in each State and Territory who report themselves to the assistant marshals as having attended school during the census year. Table XXVIII purports to exhibit the record of the schools thus attended.

Inasmuch as the former return is, so far as it is accurate, necessarily an aggregate return, and the latter is generally an average return, (although the idea of averages is rather too nice to be imported into popular inquiries, like those of the census, with any great degree of success,) it is evident that this difference of method would account for differences in figures, and, in some States, for large differences. For example, there are some States in which schools are habitually kept open for the entire year, yet certain classes of the population are able to send their children to school for but a small portion of the time. This is so notorious that the fact needs but to be mentioned to fully justify a statement of school attendance in Table XXVIII considerably below that in Table XXI for all the Middle and Eastern States. Wherever mechanical and manufacturing pursuits are followed to any great extent, the demand for the labor of children becomes so pressing that it is found almost impossible to enforce laws requiring their attendance at school during one or two "quarters," while at the same time it is in precisely these communities that schools are maintained during the entire year.

There are, however, other States in which all classes of the population are so much on an equality in this matter of school attendance that no great differences between Tables XXI and XXVIII are to be expected. These are States in which the expense of schools is only incurred during certain seasons of the year, and, at the same time, from the general desire for instruction on the part of the people, and from the fact that the entire industry of the community practically ceases during the same season, almost all who attend school during the year do so for the whole time for which the schools are open.

The facts and considerations above alluded to would account for an excess, in respect to certain States, of the numbers in Table XXI over those in Table XXVIII, such excess rising in some portions of the country to 20 and 30 per cent., while in other sections it would be reduced to a minimum or would disappear.

It would seem, however, that the school attendance stated in Table XXI should always exceed that stated in Table XXVIII, or at least should never fall below it. That the preponderance should be in the other direction would at first seem impossible and absurd. There are several causes, however, which may produce this result, although they would rarely, if ever, be found to operate in a sufficient degree to overcome the natural preponderance of the numbers in Table XXI over those in Table XXVIII in the Eastern and Middle States.

The first of these causes is found in the fact that the pupils of the private schools are, in the great proportion of instances, identical with the pupils of the public schools. In communities like those previously adverted to, where schools are maintained at the public expense for only a small portion of the year, a system of private schools, often very considerable, is called into existence to supplement the annual course of instruction for those whose lack of gainful occupation and ability to pay the fees of tuition render them desirous of pursuing their studies somewhat beyond the extent of the public provision therefor. A scholar attending one of these schools in summer and a public school in winter would be returned twice for the purposes of Table XXVIII, while appearing only once in Table XXI.

The above remarks are intended to apply to all instances of duplication in Table XXVIII where private schools are used to supplement the course of public instruction, the two classes of schools being substantially of the same grade, and the difference between them being mainly in the season of the year in which they are held and the fact of tuition being paid in the private schools. In addition to this, however, there is occasion for duplication, more or less extensive, in the fact that students every year leave the public schools by hundreds or by thousands in each State, to attend the higher

TABLE XXVIII.—*Schools, All Classes, by States and Territories—1870.*

NOTE.—To the statistics of the schools included in the table add, for the Military Academy of the United States, at West Point, in the State of New York: Teachers, 40; pupils, 229; income from public funds, \$274,489; and for the Naval Academy of the United States, at Annapolis, in the State of Maryland: Teachers, 67; pupils, 253; income from public funds, \$122,424.

institutions of learning, or to undertake courses of technical instruction. In the great majority of such cases of yearly transfers it would be inevitable that the student should be counted in the roll both of the school which he had left and of the academy, college, commercial, or other independent school to which he had gone. Similar reason for duplication, indeed, would be found in the frequent promotions occurring in the public schools themselves, wherever a graded system prevails, especially in large cities.

It ought, however, to be frankly admitted that the excess of the numbers returned in Table XXVIII over those appearing in Table XXI is occasionally due, though in no

large degree, to the neglect of the assistant marshals to properly ask the question in regard to school attendance prescribed by the act of 1850, or to failure properly to record the answers received.

The States in which, at the Eighth Census, such an excess of school attendance obtained by the canvass of institutions, (as per Table XXVIII of the present publication,) was found to exist, over the attendance obtained by the canvass of families, (Table XXI of the present publication,) were: California, Connecticut, Illinois, Iowa, Maine, Michigan, Minnesota, New Jersey, North Carolina, Ohio, Vermont, and Wisconsin. Those in which such an excess has been found to exist at the present census, are: Arkansas, Florida, Illinois, Indiana, Kentucky, Maine, Minnesota, Missouri, Ohio, Oregon, Pennsylvania, West Virginia, and Wisconsin.

TABLE XXXIV.—*Schools by Classes and Kinds in each State and Territory—1870.*

NOTE.—Each University has been treated as a group of Classical and Professional, or Technical schools. Its statistics have been twice inserted in this table; once, in parts distributed among such special schools and included in the totals of the table; again, in entirety after "Universities," in bold-faced figures, which are not additive. For the sake of economy of space in this Table the word CLASSICAL is used as the name of a Class, instead of "CLASSICAL, PROFESSIONAL, AND TECHNICAL." Parochial includes Charity schools.

* Common.

(a) The income of the several professional schools of the University, except the dental, is included in that of Colleges.

(b) The public-school law of Mississippi was passed in June, 1870. The public funds given to the private schools would seem to be on account of the tuition of indigent pupils under the provisions of law relative to the Chickasaw school-fund.

REMARKS.—The Statistics of Libraries have never been very creditable to the census of the United States. Such improvement as was practicable with the machinery provided for the collection of these statistics, has been effected at the Ninth Census, and the results will be found in the table, in comparison with the published results of 1860; but no great amount of complacency will be experienced upon a critical examination of the figures. The fact is, the machinery of the census under existing provisions of law, defective as it is in many particulars, is less adapted to work out correct results in this matter of the Statistics of Libraries than in any other use to which it is applied.

In 1860, there were returned, of all kinds, 27,730 libraries, containing 13,316,379 volumes. Of these, 8,149 were returned as private libraries, containing, in the aggregate, 4,766,235 volumes; but for some reason inexplicable at this date, 8,140 of these libraries, containing 4,711,635 volumes, were incorporated in the published table with public libraries, while the nine remaining private libraries, containing 54,600 volumes, were incorporated in the libraries of schools and colleges, as appears by notes to Table XIV (A.) of Vol. I, Ninth Census, (1870,) verified by reference to pages 502 and 505 of the volume on Mortality and Miscellaneous Statistics for the Eighth Census.

At the Ninth Census, (1870,) the total number of libraries returned was 163,353, containing 44,539,184 volumes. Of these, 107,673 were private libraries, containing 25,571,503 volumes. No return under this head was made from the State of Connecticut, the deputy marshal reporting that no exact information could be obtained.

While this increase in the number of private libraries and volumes therein, over the returns of 1860, shows that this portion of the census work has been performed with far greater effort and care on the part of the assistant and deputy marshals charged with the collection of this class of statistics, the results are yet manifestly far below the truth of the case for the whole country, while in respect to certain States the figures of Table XXXVI are almost ludicrously disproportionate.

The only compensation for this failure—for such it must be pronounced in spite of the increase over the returns of former censuses—is found in the consideration that the statistics of private libraries are not, from any proper point of view, among the desirable inquiries of the census. The statistics of the manufacture and importation of books would be far more significant and instructive, while obtained with one-tenth of one per cent. of the effort that would be required to collect accurate statistics of private libraries, based upon any classification that might be adopted.

The last clause of the foregoing sentence intimates a practical difficulty, which, however the methods of the census might be improved, would always render the statistics of private libraries of the least possible value. Unless each one of the two or three hundred thousand private collections of books which might claim admission to such a table as that in contemplation of the census law, were to be personally visited and inspected by a competent judge, it would be impossible to prevent the intrusion into that table of tens of thousands of such collections, without any merit to entitle them to a place there. No matter how carefully assistant marshals might perform this duty, or how fully instructed they might be from the central office, the mere fact of six or seven thousand persons being employed in collecting these statistics would be sufficient to

defeat, utterly and hopelessly, all approach to uniformity of treatment. One-half of the assistant marshals would call that a library which the other half would not, or, more probably, nine out of ten such officers would admit everything that claimed to be a library to their lists.

The plan most commonly urged for preventing such a want of uniformity in the collection of the statistics of private libraries is to fix a number of volumes below which no collection of books shall be returned as a library, as, say, 100, 200, 300, or 500 volumes; but it is quite sufficient, without argument, to disprove such a proposition, to indicate the practical difficulties arising from such questions as these: What shall be done with pamphlets and unbound volumes? With children's books? With school-books, old and new? With public documents, State and National? It is not too much to say that if all these classes were to be rejected, nine out of ten collections in the United States, which would otherwise pass into a table of private libraries containing one hundred volumes and over, would be thrown out, while, on the other hand, it is difficult to see what value such a table can have for any use, scientific or popular, if these classes are to be indiscriminately admitted.

(a) No returns of private libraries from Connecticut.

Passing from the private libraries reported in Table XXXVI, to libraries of other descriptions, as returned for the year 1870, a tolerable degree of completeness can fairly be claimed as the result of exceptional efforts in this direction.

Omissions of some importance have doubtless occurred in the column for circulating libraries, and differences in classification adopted by assistant or deputy marshals have caused some apparent discrepancies in other columns.

It should be said that the class "Libraries of historical, literary, and scientific societies," was intended to include only such libraries belonging to learned societies as are not open to the general public, but are reserved to the exclusive use of members or of a limited number of subscribers. This class fails, therefore, to include many libraries of learned societies which, from the fact of being open to the public freely, or upon terms of such liberality as to make their use practically universal, are, for the purposes of this table, more properly taken as public libraries. For some reason not explained, all libraries of this class for the city and State of New York have been incorporated with other classes.

REMARKS.—In a country where literary as well as business enterprises are so ephemeral as in the United States, it will of course be impossible to secure absolute uniformity between the statistics of newspapers, magazines, and other periodicals, when collected through different agencies, at dates varying ever so little, and upon independent systems of classification.

The newspaper field of the United States has been very thoroughly worked up by

(a) At 1860 and 1850 Virginia includes West Virginia.

exist between the returns of the assistant or deputy marshals in this particular and the publications of the houses referred to, inquiry has been made into the reason of the excess or deficiency in the census totals, so that, if discrepancies still remain in any case, it is because, after full inquiry, the marshal's return has been held to represent better the facts of the case from the proper point of view of the statistician, or because different dates have been taken for the returns of the census from those on which the statistics of the several business houses conducting these inquiries were collected.

It will readily be seen that considerable differences might be accounted for between statements of this character, bearing date, respectively, 1st of January, 1870, 1st of June, 1870, and 1st of January, 1871, without discrediting any one of such statements. Newspaper enterprises are constantly being started and abandoned in every section of the United States, both in the form of papers under an entirely new name and independent control, and of semi-weekly or weekly issues of long-established journals. It

is easy to see that a spirited business house, intent upon obtaining intelligence of the first movement of any enterprise of this kind, would be apt to hear of the beginning of such efforts more promptly than of their abandonment, and might embody in its annual statement many periodicals which it would not be desirable to include in the statistics of the census.

A second reason for discrepancies between the census tables and the statements prepared by private advertising agencies, is found in a different point of view, which is necessarily taken in treating the material for such tables for statistical purposes from that occupied by advertising agencies. There are very considerable numbers made of issues in every part of the country, of which it is an open question whether they are properly to be classed as newspapers or not, such as trade circulars, real-estate circulars, periodical prospectuses, sheets intended for gratuitous distribution at places of amusement, and a dozen other forms of advertisement, more or less disguised under a

show of presenting news or criticism to the public. Many of these are adapted in a very high degree to the purposes of advertisement, and are, therefore, most properly to be included in the lists of such agencies as those referred to, yet very many of them must be excluded from the tables of the census.

The law requires this report of newspapers and periodicals, on account of their relation to the moral, social, and intellectual condition of the people. To swamp this class of statistics by inconsiderately admitting hundreds of prospectuses, circulars, and advertising sheets, which can possibly have no such relations, would be undoubtedly an abuse. At the same time this subject has been treated liberally, and every periodical has been admitted to these tables which could establish a reasonable claim to be considered as within the purview of the census act.

REMARKS.—The Statistics of Churches contained in the following tables are believed to be substantially exact, and to present a just view of the organization of the several religious denominations found within the United States and of the accommodation for public worship afforded by each.

It was not to be expected or desired that the account taken in the census of the churches of the country should, in all cases, agree with the statements put forth by religious denominations through their respective official organs. The census has its own proper point of view, and applies, in some respects, different tests from those known to the compilers of year-books or registers.

A church to deserve notice in the census must have something of the character of an institution. It must be known in the community in which it is located. There must be something permanent and tangible to substantiate its title to recognition. No one test, it is true, can be devised that will apply in all cases, yet, in the entire absence of tests, the statistics of the census will be overlaid with fictitious returns to such an extent as to produce the effect of absolute falsehood. It will not do to say that a church without a church-building of its own is, therefore, not a church; that a church without a pastor is not a church; nor even that a church without membership is not a church. There are churches properly cognizable in the census which are without edifices and pastors, and, in rare instances, without a professed membership. Something makes them churches in spite of all their deficiencies. They are known and recognized in the community as churches, and are properly to be returned as such in the census.

On the other hand, there are hundreds of churches borne on the rolls of religious sects having both a legal title to an edifice and a nominal membership, which never gather a congregation together, support no ministry, and conduct none of the services of religion.

Some of the larger religious denominations, either in consequence of their peculiar organization or by reason of special efforts, maintain a careful system of reports and returns, and the statistics of such denominations are accordingly entitled to great consideration.

TABLE XL.—Churches in the United States—1870-1860-1850.

METHODIST.

Foremost among these is the Methodist Church, which, by reason of its episcopal form of government and its scheme of changing periodically the pastors of churches, is always in possession, as nearly as it would be possible to effect, of the true condition of its organization in all parts of the country to a late date. Dead churches are not allowed to encumber its rolls, and consequently the list of its several branches present their exact strength "for duty." This denomination, therefore, affords a high test of the accuracy of the returns of the census; and, notwithstanding that it presents as much difficulty in the enumeration as any other, the general correspondence between the statements embodied in the minutes of the annual conferences of the principal branches of the church, after making allowance for the known strength of certain minor branches which do not publish official returns, and the statistics of the denomination as given in the census, is, taking all the States of the Union together, very decided. The slight differences that exist are sufficiently explained by differences between the dates of the returns and by different rules of construction and classification which would naturally be adopted in doubtful cases by parties acting independently of each other.

There are other denominations, one or two, notably the Baptist, of great importance, in which an absence of central control in the government of the churches, and the want of a thorough system of reports and returns, deprive church statistics of value. It is in respect to these, as a rule, that the discrepancies between the claims of the denomination and the results of the census are greatest. In all such cases full and searching inquiry has been made; the recognized authorities of the churches interested have been freely consulted; and assistant marshals have been called on to explain the discrepancy, and to review their own statements. Hundreds of letters have been written from the Census Office on this subject; thousands of churches have been inquired for; and where differences, after all has been done, still exist, it only remains to be said that if this or that denomination has as many churches as it claims, the agents of the census have not been able to find them,

An analysis of the reports of certain religious denominations, however, is sufficient to explain the discrepancies to the vindication of the census, without further investigation. It is generally found that the aggregate reported by the authorities of the denomination is made up of two classes: first, of churches from which reports have been received up to a recent date, showing an actual organization and an active membership, with church accommodation and a ministry; and, second, of churches, often more numerous, which are deficient in one or all of these respects, in degrees ranging from partial or temporary deprivation to total and habitual destitution. In such cases, the statistics accompanying almost invariably cut in between the highest and lowest figures of the denomination; take in all the churches that are fully officered, organized, and equipped, and add to this number such of the second class as, in spite of deficiencies, answer to the true definition of a church from the point of view of the census, viz, are institutions in the community known and recognized.

BAPTIST.

The discrepancies between the returns of the census and the statistics of the church are greatest in the case of the Baptists.

The census of 1860 showed 11,221 "churches." (a)

The census of 1870 shows 14,474 church organizations; the increase in the decade being certainly as large as could have been expected. The statistics of the church, however, purport to show 17,535 churches in 1870 in the territory covered by the operations of the census, (b), a difference against the census of 3,061. But reference to the statistics of the same church shows that in 1869 only 14,084 churches were claimed, exclusive of the States of Delaware and Rhode Island, the District of Columbia, and certain Territories; adding in the number claimed in 1870 for the States and Territories not reported in 1869, to wit, 91, we have as the total churches in 1869, 14,175, (c) or 299 less than the census.

If, therefore, the statement of 17,535 churches for 1870 is correct, there must have been a clear addition of 3,360 in the single year intervening, which would be considerably more than the entire addition claimed for the nine years previous, (2,954,) which is wholly unreasonable and incredible.

Proceeding, however, to analyze the aggregate of 17,535, we find that from only 12,600 churches were reports received during the year from which the statement is made up. For 3,273 the figures were taken from the report of the year previous, in the absence of any later advices; and, for 1,662 more, estimates had to be made, in the absence even of returns a year old.

It will be seen here, as has been above indicated, that the census cuts in between the highest claim of the denomination and the number for which positive data can be shown. And in this the census conforms in an eminent degree to the reason of the case, inasmuch as it must be that many of the churches unreported are still in existence, possessing sufficient activity to justify their return by the assistant marshals, while many undoubtedly have, in the natural course of things, ceased to keep up even a form of life.

Going down from the total of the United States to the total for States, (still within the same denomination,) we find an even clearer explanation of the same facts. The discrepancies are mainly in the Southern States, where the conditions of society, especially among the freedmen, are such as would account for even larger differences than exist. In Alabama the census reports but 786; the church statistics claim 1,054; but from only 489 of these were reports actually received during the year for which the returns were made up; 445 were taken from the report the year previous, and 120 were obtained purely by estimate. In Arkansas the census reports 463; the church statistics claim 539; but only 122 of these were obtained from the reports of the year 1870, 235 were taken from the report of 1869, and 182 were obtained by estimate. In North Carolina the census reports 951; the church statistics claim 1,235; but of these only 587 are obtained from reports of the year, 228 from reports of the year previous, and 420 by estimate. In Georgia the census reports 1,364; the church statistics claim 1,946; but in 1869 only 1,478 were claimed, while the minutes of the State Baptist Convention, held at Cartersville, April 21 and 24, 1871, show but 1,738, included in which are 225 taken from the minutes of 1869, 59 taken from the minutes of 1868, and 250 taken from the minutes of conventions held before the war. The comparison might be carried through all the Southern States with much the same results.

The least impartial consideration of the above facts must convince any one that in the aggregates of this denomination, in the Southern States especially, are included large numbers of congregations "in the bush," properly, it may be, to be reported from a denominational point of view, but hardly to be returned in the census, while there are also included many churches which have been destroyed by the violence of war, or have been merged with other organizations of the same church, or have fallen into hopeless decay, in the natural course of human institutions.

The only one of the Southern States where comparison between the statistics of the census and those of the church, and an analysis of the latter according to the plan above pursued, would induce the belief that the returns of the census, as between the two, were in fault, is the State of Texas, where the conditions attending the recent enumeration were so unfavorable, so almost hopeless, as to prevent the collection of social statistics in any degree satisfactory to the Census Office. The same admission of a failure to fully return the Baptist denomination might seem, at first glance, to be required (though in nothing like the same degree) in respect to the State of Virginia; but a comparison of the results in this State with those for West Virginia establishes the soundness of the statistics of the two States taken together, and justifies the sug-

gestion that the officers charged with the compilation of these statements for denominational purposes have, not unnaturally, failed to divide the churches accurately between the old and the new State.

CONGREGATIONAL.

In respect to the Congregational Church, again, the difference between the statistics of the census and those of the denominational organs is decided, though by no means so extreme, as this denomination has never extended its agencies southward with any considerable success. The denomination claims 3,121; the census allows 2,887. In this case the difference is partially accounted for (probably to the extent of between 50 and 60) by the later date (within the same year) of the statistics of the denomination. The remaining difference is explained by such facts as those contained in the "Annual Statistics" of the Congregational Quarterly for January, 1871. Nine hundred and three churches only are there stated to have settled pastors; 1,438 have "acting pastors;" 129 are supplied by licentiates and ministers of other denominations; and 651 are "vacant." The differences in respect to this denomination are found mainly at the West, where the large number of churches without either a stated ministry or

a "supply," and the large number, also, (often the same churches,) without edifices of their own, afford ample scope for the operation of different rules of construction as to what constitutes a church for census purposes.

The most important discrepancy between the statistics of the denomination and those of the census, within any of the Eastern States, is in the State of Pennsylvania, where the agents of the census report 40 church organizations. The Congregational Quarterly claims 70; 6 only, however, having settled pastors, 31 having "acting pastors," and 33 being "vacant." In the case of 13 of the churches thus reported by the denomination, the Census Office received positive information from the postmasters of the towns or villages where they were said to be severally located that no such churches were in existence. Of the 17 remaining to be accounted for, the Census Office has been able to obtain no information of any kind through correspondence.

In Kentucky, again, the "Quarterly" claims three churches. The returns of the census show none; but in response to inquiries addressed to the pastors of 2 of the churches claimed by the "Quarterly," the Superintendent was informed that the churches should be classed, one as "Christian" and the other as "Baptist." The third is stated by the "Quarterly" to be located at "Camp Nelson," but, as there is neither town nor post-office by that name in the State of Kentucky, the inquiry could

not be prosecuted. It may be assumed, however, that the statement of a church at that place is founded upon a tradition of some local and temporary organization effected during the war at the large and important camp then formed there.

In Arkansas the "Quarterly" reports 2 churches—the census none. For only 1, however, is the post-office address given by the "Quarterly," and a letter addressed to the pastor of this church was returned to the Census Office by the postmaster, with the information that no church of the denomination existed in that vicinity. In respect to the other, (which the "Quarterly" admits to be without even a "supply," no inquiry could be instituted, for the reason that no address was given. Instances of this character could be multiplied, but the foregoing will suffice.

It is not doubted that in some cases confusion has arisen in returning the three denominations known in the following tables as Congregational, Unitarian, and Universalist, on account of the common use in some sections, and to a limited extent, of the word "Congregational," as expressing merely the form of church government, without reference to distinctions of theological belief.

UNIVERSALIST.

The denomination last mentioned by name is also reported much below the number claimed by the official organs, by reason probably of the fact that this denomination

has a larger proportion of congregations without permanent pastors than any other. For example: for the 16 Universalist churches reported in Missouri, only 1 pastor is, according to the New Covenant (a denominational organ) of February 12, 1870, wholly devoted to the ministry.

Of the 13 Universalist churches reported by the denominational Register and Almanac for 1871 as located in Kansas, only 5 claim to have the use of a church edifice; and of these two are known as "Union." The marshal of the district reports that he can only locate 1.

The discrepancies between the church statistics and the returns of the census in the case of the denominations hitherto specifically referred to, are, as will be seen above, susceptible of explanation.

UNITED BRETHREN IN CHRIST.

But the discrepancies which exist between the claims of the denomination and the statements of the census in respect to the church known as United Brethren in Christ, are wholly inexplicable, except upon an assumption of radical and total vice in the statistics of the church.

The denomination claims 3,753 church organizations. The census allows 1,445.

Wyoming.								

If the discrepancy were wholly or mainly confined to one or two States, it might seem reasonable to charge it to omissions on the part of the agents of the census. But a comparison of the figures of the census with a statement (d) prepared by the agent of the United Brethren Publishing House, at Dayton, Ohio, (the correctness of the statement being vouched for by one of the bishops of the church,) shows that the claims of the denomination so greatly exceed the figures of the census in every State in which it exists in any considerable strength, as to render it in the highest degree improbable, if not morally impossible, that the differences arise from the uniform negligence of the agents of the census in respect to this single church.

It is undoubtedly true that the erroneous application in some sections, and to a limited extent, of the name "German Methodists," would explain the occasional omission of societies properly belonging to this denomination; but the effect of this cause is not believed to have been considerable at the present census.

Something, also, must be allowed here—more, perhaps, than with denominations generally—for the effect of differing rules of construction as to what constitutes a church, according as the point of view of the denomination, or that of the census, is taken, in dealing with congregations occasionally gathered in school-houses or in private dwellings.

But after all reasonable allowance on these several accounts has been made, the Superintendent is compelled, from a careful examination of the subject, involving an extensive correspondence with the agents of the census, as well as with the officers of the church in question, to conclude that the denominational statistics are radically defective. In addition to the decided presumption in favor of the general correctness of the work of the sworn officers of the Government, to which nothing but assertion has been opposed by the representatives of the denomination, this conclusion is strongly supported by two considerations:

First. That the authorities of the denomination admit that they are unable to locate the churches they claim by towns or even by counties. Had such information been furnished, the investigation into the discrepancies existing would not have been dropped until the whole body of such differences had been canvassed by the Census Office, at whatever expense of time and labor. But the absence of anything approaching specific information regarding the location of these churches not only renders it impossible satisfactorily to determine the question at issue, but casts the greatest doubt upon the authority of the denominational statements.

Second. That the number of church organizations claimed by the authorities of the denomination bears an extraordinary and wholly unprecedented relation to the number of communicants reported. The Baptists average 80 communicants to a church organization; the Methodist Episcopal, 90; the Presbyterians, (North,) 98; the Reformed Church in America, 132, the highest average attained; the Evangelical Association, 74, the lowest. But the official organs of the United Brethren in Christ claim 3,753 churches with only 116,523 communicants, or an average of only 31 to a church. When it is considered that nearly if not quite two-thirds of the communicants of churches are, as a rule, women and minor children, we shall have as an average but 10 to 12 communicants among the adult males bearing the burden of the support of a church of this denomination—a most improbable supposition. But if we assume for the church an average number of communicants equal to that shown by the church having, of all those whose statistics on this subject are available, the smallest number, namely, the Evangelical Association, 74 members, we should have for the 116,523 communicants of the United Brethren in Christ, 1,575 churches, or only 130 in excess of the census. If, on the other hand, we assume for the denomination the average of the Reformed Church in America, viz, 132 communicants, we should have but 883 churches, or 562 below the census. If, again, we assume for the calculation the average of either the Baptist or the Methodist Episcopal Church, we should have a result in the first instance almost exactly coinciding with that exhibited in the following table, and in the second falling considerably below the number actually allowed by the census to the church under consideration.

CHRISTIAN, AND DISCIPLES OF CHRIST.

In respect to two denominations, it is admitted that the census fails to make a discrimination required by the facts of the case. From causes, the remedy for which it was not within the power of this office to apply, it became necessary to combine the statistics of the denominations known severally as "Christian" and "Disciples of Christ." The members of the latter denomination, much the stronger of the two, are so frequently termed "Christians," indeed so commonly call themselves by that name, that persons who had not made a study of the subject might readily conclude that the denominations were one and the same, whereas they are, in fact, distinct in official name and style, in organization, and in doctrine.

As an example, not only of the confusion in the popular mind respecting these two churches, but also of the negligence of the officers and members of the several churches in characterizing their own organization and services, it may be mentioned that there is a church belonging to the "Disciples of Christ," within the city of Washington, which is not only commonly, and, indeed, universally spoken of as the "Christian Church," but whose Sunday services are habitually advertised by its own officers in the public prints as those of the "Christian Church," while the edifice in which the congregation worships is inscribed, in conspicuous letters, "Christian Church." It would be wonderful, indeed, when the error is thus daily made by those who should be most interested in maintaining the individuality of the two denominations, if the agents of the census had been found to have preserved the distinction.

Had each or either of these denominations been mainly confined to a distinct section of the Union, special efforts might have resulted in an approximate classification of the data furnished by the assistant marshals. But, in view of the fact that both bodies have their greatest strength in the same States, and oftentimes in the same quarter of the same State, and in view also of the frankly acknowledged inability of the officials of each denomination to whom application for assistance was made to render any practical aid, it was deemed best to follow the precedent established in 1850 and 1880 of merging the two denominations under a single title.

The results here given are believed to present a fair statement of the combined strength of the two denominations.

One of the leading divines of the "Christians" gives the following estimate for that denomination as a whole in the United States, in answer to the inquiries of the Census Office, viz: church organizations, 1,100; church edifices, 1,050; church accommodation, 100,000; value of church property, \$735,000.

(a) The principal inquiry, under the head of religion, in the schedule of the census law, viz: "Number of churches," is, unfortunately, ambiguous. As the censuses of 1850 and 1860 were taken, it is impossible to feel any assurance, in any particular case, whether church organizations or church edifices are returned in answer to the inquiry, "Number of churches." In preparation for the Ninth Census, this inquiry was divided into "Number of church organizations. Number of church edifices."

(b) The statistics of the Baptist Church for 1870 are presented in their Year-Book for 1871, in the form of a summary by States, and, also, to a great extent, in detail, by associations within each State. Where differences between the total and the items occur they are supposed to be the result of clerical errors in the preparation of the summary, or of typographical errors in printing it, and the detailed accounts have been assumed to be correct. The total number of churches, as given on page 80 of the Year-Book, is 17,745. An accurate compilation, however, of the details, so far as presented, gives 17,527 churches. To these are to be added 7 and 16, the numbers returned, in the summary only, for Delaware and District of Columbia respectively, and 10 for the difference between the total and the items given for West Virginia, which difference, it is supposed, equals the estimated number of churches belonging to the "Free Salvation" and "Indian Creek" associations, not otherwise accounted for, making a sum of 17,560, from which should be deducted the 25 churches claimed in the Indian Territory, as outside the field covered by the operations of the census, leaving 17,535, as stated above.

(c) On page 80 of the Year-Book the total number of churches for 1869 is stated at 15,143. (See preceding note.)

(d) *Comparative view of the statistics of the United Brethren in Christ, as determined by officials of the denomination and by the census.*

(a) Includes 33 Indians.

(b) Includes 10 Indians.

(c) Includes 1 Indian.

PAUPERISM.—The Superintendent, being well aware that the above table will be subject to severe criticism from certain specialists, has thought it best to append a full statement of the plan which has been followed in its construction, as well as to make a frank admission, as has been done in respect to some of the preceding tables of this volume, of occasional errors and deficiencies.

The necessity for a distinct exposition of the rules which govern in the treatment of the subject of Pauperism will be best appreciated after a comparison of the numbers which would respectively be returned under the several classifications possible, and indeed wholly reasonable, in this connection.

Returns from the county poor-houses and the city work and alms houses of the State of New York show that on the 1st of December, 1869, the actual number of the inmates of these institutions was 15,053. On the 1st of December, 1870, the aggregate number

(d) Includes 2 Indians.

(e) Includes 3 Indians.

of inmates was 15,352. The date taken for this return, viz, the 1st of December, would probably not show quite so large a number of paupers as a date nearer the close of the winter; but December would certainly exhibit a larger number than any other month of the spring, summer, or autumn, excepting March, and possibly April, and is therefore to be regarded as presenting an unexceptionably fair average for the year.

Yet the books of the same institutions record the admission during the year, whose beginning and ending are thus defined, including those remaining at the beginning of the year, of no less than 59,136 "persons." In addition, the number of persons receiving temporary and partial out-door relief in the State of New York through the year in question (at an expense of \$911,855.16) is returned at 101,796, making the total number of "persons" receiving aid from funds appropriated distinctly for the poor, 160,932.

But a still further extension of the list of public pensioners might, upon a possible,

* In the opinion of the Superintendent of Census, no use of these figures for purposes of comparison between States and sections, or between the several periods of time covered by this publication, will be justifiable, unless reference is had to the remarks which are beneath the table.

and indeed from its own point of view an entirely reasonable, theory of the case, be claimed and allowed. The immigration commissioners for New York report having expended during the year 1869 \$330,000 for the relief of poor immigrants. There was also appropriated from the treasury of the State, or of the city of New York under laws of the State, during the same year, in assistance to hospitals, dispensaries, infirmaries, asylums, &c., the sum of \$1,903,075.59.

Allowing for the persons participating in the benefits of these expenditures, we should have the State poor very considerably increased, even above the enormous numbers already expressed.

The number of persons given in the table as "supported during the year," for the State of New York, is 26,152.

The foregoing statements will sufficiently illustrate the importance of having the tables of pauperism for the several States and Territories made up upon a uniform plan.

It was the want of such uniformity of construction, in connection with manifest looseness in the collection of material, which yielded such impossible and altogether

irrational results in the publication of the census of 1860, as New York, with a population of 3,880,735, having a pauperism of 164,782, (average cost per head less than \$9,) while Pennsylvania, with a population of 2,906,215, in the same general condition of settlement and industry, showed only 16,463 persons supported during the year, (at a cost of something over \$40 a head;) Michigan, with a population of only 749,113, having a pauper list of 9,104, (average, \$12,) while Illinois, with a population of 1,711,951, was returned with only 4,628, (average, \$42;) Massachusetts, with a population of 1,231,066, engaged principally in manufactures, having a pauperism of 51,880, (average, \$11,) while Connecticut, also a manufacturing State, with a population of 460,147, was returned with only 4,044 paupers, (average, \$31.) Comparisons like these, which might be extended through pretty much the whole list of the then existing States, show at a glance that no effort was made at the Eighth Census to impose anything like a uniform rule upon the returns of pauperism; that some States were returned with a pauper-list three, five, or ten times as large as States in the same general condition of settlement and industry, for no other reason than that in one State the aggregate cost of poor-relief was practically divided by the known cost of sustaining one pauper one year, and the quotient taken for the number of persons supported during the year, while in another State all persons entering a work or almshouse, for ever so limited a period, were included, and, in a third, every person receiving so much as a half ton of coal in

(*) See note (*) on preceding page.

(†) The nativity of 34,662 free persons was not returned on the schedule. For their distribution among the States and Territories, see Table X, page 377.

a hard winter, or a dozen soup-tickets, was set down among the State's poor. While claiming in respect to this as little as in respect to any other class of the statistics of the census, and, indeed, loss with respect to this than to almost any other, absolute accuracy, the Superintendent must claim the credit of having attempted to introduce as fully as, with the vicious machinery of the present census law, was possible, discrimination and order into the returns of pauperism.

In a country presenting such wide diversity in the conditions of life, settlement, and industry as the United States, four things would be essential to anything like a complete exhibit of the pauperism of all the States:

First. The number of persons actually inmates of asylums, alms and work houses, on one or more days certain during the year. It would be desirable that three or four dates should be taken for the count. If, however, only a single return could be obtained, the date taken should be as strictly representative of the year as possible. This condition, the day previously indicated as taken for the return in New York, viz, December 1, fairly answers. The census date, June 1, is as little representative as any could be.

Second. The amount of pauperism calculated *impersonally*, i. e., by dividing the aggregate expenditure for poor-support by the ascertained cost of maintaining, in each State and section by turns, one pauper for one year.

Third. The number of persons who, for any period, however limited, from beginning to close of the year, become inmates of any of the different classes of charitable institutions.

Fourth. The number of persons receiving, in any form and in any degree, relief or assistance in money or by supplies at the public expense.

Nothing less than the above would put the statistician, the economist, or the social philosopher, in a position to work out all the relations of the pauperism of such a country as this to the social and economical interests of the people. But unfortunately the census law of 1850 allows the authorities and agents of the census to compass but two of the four points of importance in the consideration of the subject. One of the two is the number of inmates of asylums, alms and work houses on a day certain, corresponding to the first of the series of four just enumerated. The other of the two questions which the law allows may, by the authorities of the census, be made at their discretion to cover any one of the three remaining points, and, of necessity must leave the other two uncovered.

The phraseology of the law on this subject, "number supported during the year," is, as usual, ambiguous. It would certainly be within the scope of administrative construction to determine this inquiry to meet any one of the three following points:

First. Number supported during, *i. e.*, throughout, the year. The philological argument is rather in favor of this construction. This would give the *impersonal amount* of pauperism, provided, at least, it were held legitimate, as it clearly might be, to reduce partial to total support at the ascertained cost of the latter.

Second. The number during the year receiving support, greater or less, in public institutions, *i. e.*, receiving support at any time and for any time "during the year," *i. e.*, within the year.

Third. The number receiving support, *i. e.*, assistance at public expense, as above, but without reference to the manner in which such assistance be rendered, whether total support in alms and work houses, or occasional out-door relief.

It being within the discretion of the authorities of the census to direct the one remaining inquiry of the census so as to reach one of these three points, the effort has been made at the present census to bring the returns as nearly as practicable to what may be termed the solid amount of pauperism.

The reasons which controlled the Census Office in selecting this in preference to any other form of returning pauperism were as follows:

First. The most exact single expression possible for the actual pauperism of a country is undoubtedly obtained by dividing the aggregate cost of support by the ascertained cost of supporting one pauper for one year. This gives the *amount* of pauperism, reducing it to a solid form, and affording opportunity for easy and just comparison between States and sections.

Second. The number of "persons" shown, by the records of asylums, alms and work houses, to have been received and discharged during the year, is largely fictitious, sometimes even to the extent of one-half, two-thirds, or five-sixths. An individual of the pauper class will sometimes put in as many appearances during the year at the almshouse, as an individual of the criminal class at the police court; and when he has worn out his welcome at all the institutions of the metropolis, by turns, will make the tour of the provinces. In fact, at many city almshouses, almost the only steady boarders, besides young children, are the insane, the blind, and the crippled. Such facts are too notorious to require extended evidence. An analysis of the returns of the county and city alms and work houses for the State of New York affords a striking illustration. Of the 15,352 inmates on the 1st of December, 1870, 5,517 were stated to be children under sixteen years of age, or to be insane, idiotic, blind, or deaf and dumb. These persons, it may be assumed, did not move about to any appreciable extent, but belonged permanently to the *personnel* of their respective institutions. Deducting these 5,517 from the entire body of inmates, we have but 9,835 who, in the absence of any stated disability, may be assumed, for the purpose of this argument, to belong potentially to the vagabond class of paupers, although large numbers even of these must have been disabled for self-removal by reason of being crippled or maimed. The records of these institutions, however, show that not less than 59,136 "persons" were admitted during the year. Deducting the same 5,517, we have 53,619 entries during the year, to 9,835 actual inmates (not disabled as above) on a day certain, which day, December 1, may be accepted as fairly representative of the year. Such facts as these show how little the record of "admissions" to poor-houses can be taken as affording a just measure of pauperism.

Third. Not only do the difficulties of the work increase almost indefinitely as we seek to carry our inquiries out to determine, free of duplications, the actual number of persons receiving temporary and partial assistance, out of doors, from public funds; but the value of the results diminishes with much the same rapidity. If it were practicable, it would certainly be of curious interest to know the exact number of persons thus relieved in any city or section of the country; but when we consider that the relief thus extended ranges from partial support to the most trifling assistance—a bushel of coal, a few soup-tickets, or even a single dinner, in some cities being scrupulously made a matter of record and report—it must appear plain that these are not the facts in respect to poor-support which are to be obtained at the sacrifice of those which could be used to determine with approximate accuracy the absolute amount of pauperism, its bearing on the social system, and its burden on the industry of the country.

For the reasons above indicated, the Census Office has sought to compass in the preceding table the positive amount of pauperism in each State and Territory, reduced to permanent and entire support. No one who appreciates the lack of system which exists in ninety-nine out of one hundred of even the important communities of this land in respect to matters of this kind, the general absence of well-kept and properly-posted records, and the frequent indifference of officials to statistical or scientific inquiries, will be surprised to find much in this table, after all has been done which the existing law authorizes and enables the Census Office to do, which cannot be said to consist strictly with any single rule.

The cost of support varies greatly in city and in country, and very much also according to the system of poor-relief adopted. The difference between city and country may be stated approximately as follows: Annual cost of support in rural districts, \$75 to \$90; annual cost in cities and large towns, \$90 to \$125. The local system of poor-relief, however, enters, sometimes to equalize these expenditures, and sometimes to exaggerate the differences above indicated. Under a system uniform throughout the State, it happens in more than one State that the paupers in purely rural districts are maintained quite as expensively as the poor of the largest cities.

Unquestionably the most economical method of treating the pauperism of a community is found in the town-farm system. Land, buildings, and farming-tools being provided by the town, only one salary, that of the overseer, requiring to be paid, and the labor of the paupers being employed to the full extent of their physical ability, the annual charge of support in the States using this agency is reduced to a minimum, often not exceeding sixty or even fifty dollars. When it is remembered that an able-

bodied laborer, engaged in agriculture in this country, can without difficulty provide food for himself and for three, four, or five persons dependent on him, it will appear wholly reasonable that even the partial and ineffective labor of the pauper on the town farm should so far reduce the cost to the State of his maintenance. In those States, on the other hand, where paupers are gathered into large establishments, with numerous officials and expensive appointments, and with no opportunity for employing the inmates productively, all articles of food and clothing have to be directly purchased by the State, and the cost of support rises to \$100, \$125, and even \$140. In the mining States and Territories, where all articles of merchandise bear high prices, and where the number of paupers to be maintained is not sufficiently large to make it important to rigidly reduce expenditure on this account, the average cost of support rises to even a higher figure.

In addition to the points already discussed, two questions remain as to what elements shall or shall not be included in the Statistics of Pauperism:

First. Shall the amounts expended in the immediate relief of poor immigrants by the immigration commissioners of New York and other large ports of entry be regarded, for the purposes of the following table, as forming a part of the poor-support of those cities and of the States in which they are severally situated? The amount thus expended by the immigration commissioners of New York during the year 1869 was, as already stated, \$330,000. The amount so expended at other points must have been considerable.

The Superintendent is disposed to hold that such an expenditure should be regarded merely as incidental to a gigantic system of immigration directly encouraged by the Government. While immigrants continue to arrive at our shores by hundreds of thousands each year, it is a matter of course that some, from sickness, from failure through ignorance to make proper provision, from accidents of one sort and another, and last, not least, from the villainies of the organized hordes of ruffians which beset our immigrant ships, will have occasion, in a wholly strange land, to appeal for temporary assistance to the guardians by law appointed over them. This is hardly pauperism in any proper sense, and until the immigrant has passed from under the control of the commissioners of immigration into the condition of a recognized and registered inmate of some asylum or almshouse, he cannot be said to constitute one of the paupers of the city or the State.

Second. Shall the amounts paid from the treasuries of States, counties, or cities toward the support of charitable institutions of the various classes known to modern philanthropy, hospitals, dispensaries, asylums for the insane, the idiotic, the blind, the deaf and dumb, be included in such tables as the preceding?

Here, again, the best reason of the case seems to be in favor of the stricter construction and the exclusion of these elements as not pertaining to the proper poor-support of the country.

The pauperism of the afflicted classes, inmates of such institutions, is to be regarded as an incident of their several disabilities or infirmities. Some of these persons would undoubtedly be paupers were they not so afflicted; but far more are only paupers because they are thus afflicted, and while thus afflicted. The greater fact, the principal, is properly the one in contemplation; the minor, the incident, may justly be disregarded in such a compilation as the present. One point certainly can be successfully maintained, and it is conclusive of the question, were there nothing else to be said, viz: that the framers of the census law did not have it in contemplation that the beneficiaries of hospitals, dispensaries, and asylums distinctly for the blind, the sick, or the insane would be embraced in the returns of the census.

If it were worth while to accumulate reasons, it might further be said that the inclusion of these classes in the pauperism of the country would be a troublesome precedent in view of the acknowledged fact that nineteen-twentieths of the academies, colleges, and professional schools of the country are, by virtue of their endowments, accumulated often through several generations, rendered mainly eleemosynary, and that not one-half, perhaps not one-fourth of those who now enjoy their advantages could aspire to do so, if required to pay the real cost of what is thus furnished them.

CRIME.

The necessity for a discriminating treatment of the returns of assistant marshals is even more evident in respect to the Statistics of Crime than has been noted in the remarks above upon the Statistics of Pauperism, while on the other hand the difficulties of the subject are found to be much greater.

No single measure can be taken for determining the proportions of crime in the several communities of our country.

It is easy, by a simple arithmetical process, to obtain the *solid amount* of pauperism, but not so of crime. The absence of any effort to reduce to a consistent body the returns on this subject at the last census led to similar misrepresentations of States and sections as have been noted in the published Statistics of Pauperism; Pennsylvania, for example, being returned with but 2,930 convictions during the year, while New York,

with a population only a little larger and in much the same social and industrial condition, was returned with 58,067, or nearly twenty times as many as Pennsylvania. It would not even require the most casual acquaintance with the communities thus characterized, or stigmatized, to establish the certainty that such statements could not be true. Human nature, with its opportunities and its temptations, does not vary to that extent with two degrees of latitude.

Returns thus out of all proportion were due to the fact that in the former State convictions of crime before courts of record only were taken for the census returns, while in the latter the convictions of police and justices' courts were indifferently admitted. Again, in another class of cases, the returns from one State would be restricted to convictions for grave offenses, without reference to the character of the tribunal, while in a neighboring State convictions for the most petty offenses were equally considered.

In the preparation of the preceding table the effort has been made to reduce the material to something like consistency and uniformity. Of course it is not possible, with the inadequate inquiries authorized to be made by the act of 1850, and with the more inadequate agencies provided for the prosecution of these inquiries, to present the criminal statistics of the States satisfactorily, according to any idea or plan. Even to present the most summary view of the subject with anything approaching success, it would be indispensable that the Census Office be furnished with a statement of the convictions in each State, classified according to the crimes for which convictions were had. This the scheme of enumeration in use in the United States does not provide for. So far as it has been practicable to obtain the information at the Census Office by subsequent correspondence, it has been done without consideration of the amount of labor involved therein, and the preceding table has been corrected accordingly.

Owing to the fact that the constitution of courts of record in the several States varies greatly as to the crimes over which they have jurisdiction, it has not been found practicable to make this table strictly one of convictions for crimes by courts of record. The effort has been, however, to make the returns for each State an equivalent for those of every other, and the results are now submitted with the remark that neither the statements of crime nor those of pauperism *for the year* are regarded as possessing any high degree of statistical authority. They are believed, however, to contain a very much larger amount of exact and of approximate information than it is in the power of any individual or of any other public agency to collect. The numbers reported respectively as receiving poor-support, and as in prison *on the 1st of June, 1870*, are regarded as quite accurately determined. Errors may be found to exist, but an extensive correspondence on the part of the Census Office has established their substantial accuracy and completeness.

From the number in prison have been excluded the inmates of houses of refuge, houses of correction, and institutions of kindred character.

AREAS, FAMILIES, AND DWELLINGS.

NOTES ON AREAS.—(a) The land surface of the United States, 3,603,824 square miles, when increased by the water surface of the great lakes and rivers, brings the total area of the United States to 4,000,000 square miles.

(b) The increase of the total area of the United States at 1880 over 1850 represents that territory acquired from Mexico known as the Gadsden purchase. The increase of the area at 1870 over 1850 expresses the acquisition of Alaska.

(c) The area of the Indian Country at each census includes the area of the unorganized territory which is west of that Country.

NOTES ON FAMILIES AND DWELLINGS.—(d) At the census of 1860 and 1880, the families and dwellings of the free population only were returned. Hence the computations in the above table for those cen-

notes respecting persons to a family or to a dwelling have been made on the basis of the free population. The true number of families in the United States at 1860 may be approximated by adding to the total families in the table 748,618, being the families of the slaves, calculated at the average persons (5.28) to a family, for the free population of the United States at that census. The number of families thus becomes 5,959,752. By the same process, the families at 1850 become 4,174,553. The dwellings increased for the slaves respectively, at the rate of one dwelling to six slaves, (the estimate adopted at 1850,) become, for 1860, 5,628,652, and, for 1850, 3,896,389.

(c) The families and persons to a family for Utah, at 1860, have been obtained by combining the families and population of Utah and Nevada separately in the report of the Eighth Census. Nevada was not made a Territory until the year 1861.

THE CONSTRUCTION OF THE TABLE OF AREAS.

The construction of the columns of areas in the preceding table has been attended with difficulty, owing to the uncertainty of the official data. As late as 1850, and even at 1860, the reported areas of the Territories and the extreme Western States were mainly estimates, or at best approximate calculations, and even at the present time are not generally the result of completed surveys. For the purposes of this table the areas given in the report of the Commissioner of the General Land Office for the year 1870 have been taken as correct with one exception. In that report the area of Nevada is given as 112,090 square miles. In this area table it has been reduced by 7,965 square miles. The facts relied on to justify this reduction are that the statute erecting Nevada, after fixing its boundaries, provides that the part of California included by the act in Nevada shall not become a part of Nevada until California shall assent to the transfer. California has at no time assented, therefore the area of this strip of land, 7,965 square miles, has been deducted from the reported area of Nevada, and the area of California has not been changed, inasmuch as this tract appears to have been included both in California and Nevada in the table of the General Land Office for the year 1870. Assuming thus the areas of 1870 as standard, the official figures for 1860 and 1850 have been brought to them, where the boundaries of States have remained unchanged. Where transfers of territory have been made it has been sought, in the preceding table, to account accurately for the gain and loss during each decennial period. The principal transfers of areas from one civil division to another, in the columns of the table, are as follows:

The territory given as the Indian Country in the column for 1850, 195,274 square miles, appears at 1860 both as the Indian Country, 68,991 square miles, and as the Territory of Kansas, 126,283 square miles. The latter again at 1870 appears both as the State of Kansas, 81,318 square miles, and as a portion of the Territory of Colorado, 44,965 square miles.

The Territory of Minnesota at 1850, 165,491 square miles, appears at 1860 as the State of Minnesota, 83,531 square miles, and the Territory of Minnesota, 81,960 square miles. The latter appears in 1870 as a portion of the Territory of Dakota.

The Territory of Nebraska was not organized until 1854. The area on the line given to that Territory in the column for 1850, 351,558 square miles, represents the then unorganized portion of the public domain, exclusive of the Indian Country, as tabulated. It was then called the Northwest Territory. It had the same extent as Nebraska, when organized four years later, as the same appears in the column for 1860. The Territory of Nebraska of 1860 appears in 1870 as the entire State of Nebraska, 75,995 square miles, a portion of the Territory of Colorado, 16,035 square miles, a portion of the Territory of Dakota, 68,972 square miles, a portion of the Territory of Montana, 116,269 square miles, and a portion of the Territory of Wyoming, 74,287 square miles.

The Territory of New Mexico at 1850, 215,807 square miles, appears in 1860 with an increase of 45,535 square miles, representing the territory acquired from Mexico by the Gadsden treaty. The area of the Territory in 1860, 261,342 square miles, is represented in 1870 by the whole of the Territory of New Mexico, 121,201 square miles, the whole of the Territory of Arizona, 113,916 square miles, a portion of the State of Nevada, 12,225 square miles, and a portion of the Territory of Colorado, 14,000 square miles.

The Territory of Oregon at 1850, 288,345 square miles, appears in 1860 as the State of Oregon, 95,274 square miles, and the Territory of Washington, 193,071 square miles: the latter in 1870 appears as the whole of the Territory of Washington, 69,994 square miles, the whole of the Territory of Idaho, 86,294 square miles, a portion of the Territory of Montana, 26,901 square miles, and a portion of the Territory of Wyoming, 9,882 square miles.

The Territory of Utah at 1850, 220,196 square miles, appears without change in 1860. In 1870 it appears as the whole of the Territory of Utah, 84,476 square miles, a portion of the Territory of Colorado, 29,500 square miles, a portion of the State of Nevada, 91,900 square miles, and a portion of the Territory of Wyoming, 14,320 square miles. (See Historical Notes, Vol. I, Ninth Census.)

TABLE XLVII.—Families, Dwellings, and Population in Fifty Principal Cities—1870.

THE SCOPE OF THESE TABLES.—The tables of occupations embrace gainful and reputable occupations only. While expressing the employments of more than twelve millions and a half of persons, they do not seek to account for the larger number of those within the same periods of life, who have no recognized occupation for which they receive compensation in the shape of wages or salary, or from which they derive products of a merchantable character. All persons, moreover, whose means of livelihood are criminal, or, in the general judgment of mankind, shameful, are excluded.

The reason for excluding gamblers, prostitutes, keepers of brothels, and such persons from the Tables of Occupations has not been found in any sensitiveness at the mention or recognition of these classes as actually existing in the community, but in the consideration that, from the necessity of the case, the numbers thus reported must be wholly inadequate to the fact, and that a seeming count of them in the census would have the effect to mislead rather than to instruct. Here and there, at the enumeration of the Ninth Census, such persons had the assurance to report themselves by their true designations, or assistant marshals took the responsibility (and in some cases the risk) of writing down the real occupation of members of these classes who had sought to misstate their avocations or to disguise them under ambiguous terms; but an analysis of

the schedules soon made it evident that this had not been done, as indeed was not to be expected, with such uniformity as to secure even approximately correct results. All such titles were, therefore, dropped. Some from these classes may have taken refuge, through false statements, in one or another of the occupations of good repute (notably keepers of brothels as "boarding-house keepers," a euphemism familiar to the compilers of city directories,) but, as a general rule, where the calling was not correctly given it was wholly withheld; and it may therefore be assumed that substantially the whole body of persons pursuing disreputable and criminal occupations are omitted from these tables. There are no means known to the Superintendent for accurately calculating the number thus excluded or excluding themselves.

The number of those who are not accounted for exceeds, as a matter of course, in a majority of States, the number of those who are returned as pursuing gainful occupations.

The following table exhibits the number of persons in each of the six recognized divisions of the tables, according to age and sex, in comparison with the number of living inhabitants of each such class:

	16 to 59.		60 and over.	
	Male.	Female.	Male.	Female.
Number of living inhabitants, (10 years and over)....	10,429,150	10,257,645	989,516	948,265
Number of persons in Occupation Tables.....	9,486,734	1,594,783	634,837	50,405
Difference	942,416	8,662,862	354,679	897,860

It will be observed that while the aggregate number of persons in the United States above the age of 10 is 28,288,945, only 12,505,923 are accounted for in the Tables of Occupations. An examination of the several classes into which this aggregate is divided shows that the omissions are mainly among females, and children below the age of 16 years.

The adult males of the country are as fully accounted for as could be expected. Of 10,429,150 between the ages of 16 and 59, inclusive, 9,486,734 are assigned gainful

(a) Ten years and over.

occupations; while of 989,516 above the age of 60, 634,837 are accounted for. The difference in the former period (i. e., 16 to 59) is substantially made up, first, by the number of students pursuing courses of instruction beyond the age of 16; second, by the number of persons afflicted with permanent bodily or mental infirmities disqualifying them from participating in the industry of the country; third by the numbers of the criminal and pauper classes. The number of men of this period of life, not disabled, who are not returned as of some specific occupation, by reason of inherited wealth, or of having retired from business, is hardly important enough to be mentioned here. The difference in the latter period (i. e., from 60 upwards) is accounted for by the numbers of persons respectively of the second and third classes just mentioned.

and by the, perhaps, larger number of persons retired from active pursuits by reason of an acquired competence, of support secured from grown children, or of advanced age.

Turning to the table of the occupations of females, (Vol. 1, quarto, Ninth Census,) an analysis of the numbers reported as of specified occupations in the three several periods of life, shows a curious, though probably not significant, rate of progression. In the first period, the females pursuing gainful occupations are to the males as one to three; in the second period as one to six; in the third period as one to twelve.

It would not seem to be difficult to account for the females of each class who are not represented in the Tables of Occupations. The number of female children attending school during the census year, as obtained by the canvass of families, (see Remarks on School Attendance, page 448 of this volume,) was 3,180,313. Assuming, as it is probably fair to do, that two-fifths of the female children under 16 who are reported

as pursuing gainful occupations, are also embraced in this total of school attendance,* and, on the other hand, estimating the number of female children of this period of life belonging to the pauper, vagrant, or criminal class at 100,000, we shall have something like 500,000 school attendants among the females of the second period of life. Subtracting this from the total number of females between 16 and 59, we shall have in round numbers 9,750,000 persons, of whom only 1,594,783 appear in the Tables of Occupations, leaving, say, 8,150,000 to be accounted for.

As the considerations remaining to be adduced apply equally to females of the third period of life, we may now add their number to the total already obtained, making the aggregate of females above 16 unaccounted for in the neighborhood of 9,100,000.

* The number of female children embraced in the Tables of Occupations has just been shown to be 191,100. Of these, 73,177 were engaged in agriculture, 1,116 in trade and transportation, 25,664 in manufactures and mining, and 91,143 in personal services, 86,905 of the latter being employed as domestic servants. It is probably within bounds to assume that two-fifths of these were afforded facilities for attending school during some portion of the year.

It would at first appear that a clear deduction should be made of one person on account of each family returned in the census, in all, 7,579,863. This number must be reduced, however, to the extent to which females, the heads of families, and doing all the housekeeping that is done for their families, are also returned as of specific occupations.

No one familiar with factory-towns will doubt that this reduction should be considerable; yet we shall probably reach the truth of the case substantially if we cut down the number to be considered as accounted for as "keeping house" to 7,400,000.*

* It must be remembered that this reduction is upon a total of only 1,645,188, the number of females of 16 years and upward appearing in the Tables of Occupations. Of this number, 323,791 are engaged in agriculture, 17,362 in trade and transportation, 338,286 in manufactures and mining, and 975,529 in rendering personal and professional services. An examination of the numbers reported under each specified occupation will lead to the conclusion that many employments, and these quite the most important, furnish practically no cases whatever of such union of family-housekeeping with paid service elsewhere. The number allowed on account of such duplication, 179,363, appears, from a particular even more than from a general view, to be ample.

This latter number, then, is to be subtracted from the aggregate, 9,100,000, leaving 1,700,000 as approximately the number of females above 16 who are not accounted for as attending school or as keeping house for their families.

Reason will be shown later in these remarks for believing that females, both women and girls, to the number, probably, of one or two hundred thousand, (it is impossible to reach any assurance in respect to the extent of these omissions,) who do actually take part, more or less, in the (paid) industry of the country, are not embraced in the Tables of Occupations. This further deduction, therefore, has to be made. Taking the mean of the two numbers just indicated, and subtracting it from the number 1,700,000, we shall have 1,550,000 as the remainder, being the number of females above 16 years of age not participating in gainful occupations, nor yet attending school or keeping house.

In the absence of data for calculation and even of reasonable grounds for conjecture, the Superintendent will not attempt to distribute this total among the elements of

which it is composed. Whoever will consider the numerous and various classes which appear here, grown daughters living at home, widowed mothers supported by their children, ladies living upon the income of accumulated property, as well as women of the pauper, vagrant, and criminal classes, will be surprised that this number is as small as it is, rather than that it is so large.

DISTRIBUTION BY AGES.—In order to enable such comparisons as the above to be readily made between the total number of inhabitants (male and female) in each period of life, and the number of persons engaged in any or all gainful occupations within that period, certain of the present tables are introduced by statements of the number of males and females of ages, respectively, 10 to 15, 16 to 59, and 60 years and upward. It needs to be said that, while the class 60 and upward was obtained by actual count, and while the sum of the two classes 10 to 15 and 16 to 59 was obtained in the same way, the distribution of this total between the two classes has been effected in a degree by calculation and not by count, for the reason that in the compilation of age and sex the "break" occurred at another place, namely, between the years 14 and 15, and not, as chances to be required for the present purpose, between the years 15 and 16. In order, therefore, to the comparison above indicated, the number of persons of each sex who had reached the age of 15 at the date of enumeration, but were still under 16, has been carefully calculated, and the result added to the number known to be from 10 to 14, to make up the class 10 to 15.

THE CLASSIFICATION ADOPTED.—The plan pursued in the compilation of these tables has been to refer every specification of occupation to some grand division of industry; and within each of such grand divisions to constitute as many distinct subdivisions as the nature of the material furnished by the enumerators would allow to be formed with a reasonable approach to completeness, subject, however, to certain conditions which will be presented in the further course of these remarks.

The Superintendent is familiar with the reasons which have induced many European statisticians to abandon the grouping of occupations according to such assumed grand divisions of industry as agriculture, manufactures, trade, &c., and to resort instead to a system of expressing the employments of the people through a large number of minute and precise specifications, susceptible of being combined and recombined successively, according to different ideas or theories of classification; but he is convinced that the conditions and limitations of industrial statistics, at least within the United States, will not allow of such nicety in the treatment of material, and, moreover, that the highest purposes and the largest uses of such statistics require something closely approaching the plan of treatment adopted in the following tables.

The Superintendent is ready to admit the theoretical inferiority of the somewhat "rough-and-ready" classification he has adopted to the scientific precision of the British system; but it is decisive of the question, in his mind, that he has never known the census statistics of occupations resorted to, either in congressional debates or in newspaper or magazine discussions, for any purpose which would not be practically answered by the following tables.

It is perhaps not necessary to pursue the subject, but it may be interesting to note two things in this connection.

First. That the subdivision of labor and the organization of industry in the United States really correspond rather to the classification of occupations adopted in these tables than to the nicer distinctions of the foreign statisticians. Indeed, instead of throwing away valuable discriminations, the difficulty is so to treat the returns as reasonably to fill the classes here given. Whoever will consider the almost utter want of apprenticeship in this country, the facility with which pursuits are taken up and abandoned, and the variety, and, indeed, seeming incongruity of the numerous industrial offices that are frequently united in one person, will appreciate the force of this argument. For example, the distinctions in the profession of the law, which are known and recognized decisively in England and on the Continent, are not maintained in this country except in a few great cities, and there only in exceptional cases. The same person with us is law-scriver, collector of debts, prosecutor of claims, counselor, attorney, possibly, also, judge. Again, the organization of domestic service in the United States is so crude that no distinction whatever can be successfully maintained. A census of occupations, in which the attempt should be made to reach anything like European completeness in this matter, would result in the return of tens of thousands of "housekeepers" and hundreds of thousands of "cooks," who were simply "maids of all work," being the single servants of the families in which they were employed. Again, the British distinction between the merchant and the shop-keeper is impossible in this country. If anything whatever could be predicated of the two classes in this respect, it would be that the smaller dealers cling more pertinaciously to the larger title. Still, again, the British "farmer" is wholly unknown with us. The American farmer is, at least in nine hundred and ninety-five cases out of a thousand, the owner of the land he cultivates.

three thousand subdivisions with appropriate entries without much loss and confusion. As assistant marshals are appointed under the American system, nice discriminations in respect to industrial relations can hardly be maintained in a sufficient proportion of cases to give value to the aggregate results. Of course, accuracy of definition is of no value if the content be inadequate. It may even be doubted whether the enumerators

ization of each man's employment in the common phrase of the working people themselves. Certainly, it is not to be thought of in the United States.

The employments reported in the census have been, for the purposes of this publication, brought under four general titles, viz, Agriculture, Manufactures and Mining, Trade and Transportation, Personal and Professional Services, the latter having somewhat of a residual relation to the others, and yet in the main a substantial character, and with limits not hard to define.

(a) Not specified.

(b) See Book-keepers and accountants in stores, and Clerks in stores.

(c) Not agricultural implements.

The reason for making a common title for Trade and Transportation must be sufficiently evident without explanation.

Mining, which stands in idea between agriculture and manufactures, in that, like agriculture, it obtains the raw material of subsequent industrial processes, while, like

manufactures, its agencies and forces are chiefly mechanical, not chemical, has, for convenience mainly, been assigned to the group of Manufactures.

A still stronger consideration of convenience, though with somewhat less clear considerations of propriety, induced the Superintendent to place the fishing industry in the category of Manufactures. The number of persons engaged in the fisheries will always and inevitably be below the fact, for the reasons, first, that this industry is usually pursued for a season only, while, for the remainder of the year, the fisherman

(a) All apprentices to manual trades, whose trades were specified on the schedules, have been included in these tables, with the journeymen of their respective crafts.

(b) See Builders and contractors, (not specified;) also Bridge, House, and Railroad builders and contractors.

(c) See Trunk and valise makers.

(d) See Tobacco-factory operatives.

(e) In manufacturing establishments, (not specified.)

(f) See Mill and factory operatives, (not specified,) and Woolen-mill operatives.

follows some other gainful avocation under which he will preferably be reported:*

* Often, indeed, fishing is carried on at any season of the year only incidentally to some other occupation from which the family derives its principal support.

second, that no inconsiderable proportion of the persons actually engaged on the water in this pursuit, at the time of the enumeration, having no families to report them, are entirely omitted from the census under the American system; third, that where fisheries are carried on in vessels larger than the ordinary row or sail boat, the hands employed are generally known, not as fishermen, but as sailors. The last statement holds true of the vast majority of all persons who are engaged in the whale, cod, and mackerel fisheries. It is true that, according to the theory of a census of occupations taken in the interest of industrial science mainly, vessels so employed should, with all their hands, be excluded from the class of transportation and be returned as engaged in the fisheries; but this distinction is one which it appears hopeless to make, at least

(b) See Stove, furnace, and grate makers.

(c) See Cotton-mill operatives and Woolen-mill operatives.

(d) See Shirt, cuff, and collar makers and Tailors, tailoresses, and seamstresses.

in a census of the United States, with the agencies provided by existing laws. We are compelled, therefore, to accept the result that the great majority of persons engaged in the fisheries are returned as sailors merely. The residue are not worth constituting into a separate grand division of industry, and have, therefore, been carried into the manufacturing class, to which, by the way, it may be remarked, though that affords no very good reason, the census-law assigns the fisheries.

THE COMPLETENESS OF THESE TABLES.—Comparison of the numbers reported in the Tables of Occupations with the numbers found under corresponding titles in the Tables of Manufactures, will discover discrepancies of very important extent, which require to be here accounted for, not only in justification of these tables, but for the additional light which such an investigation throws upon the industrial capacity of the country.

Not only do important discrepancies exist, but they are found to be of two kinds, of diametrically opposite direction. In one class of cases the numbers reported in the Tables of Occupations appear to be much too large; in the other, far too small. Two

broad reasons are found in the very form of a census taken under existing laws in the United States, one of which explains the first class of discrepancies, while the other covers the ground of the second. As these discrepancies are capital in their extent, they require to be discussed at some length.

TABLE LXV.—Occupations: The United States, by Classes, and severally, &c.—Continued.

First, however, it needs to be stated just what constitutes a discrepancy. A failure in the numbers reported in the one place and in the other to balance exactly is not a discrepancy. On the contrary, this is to be expected; and if the numbers are found to be in excess in the proper set of tables, and to be in excess to only the proper extent, this furnishes a statistical proof of a high character. The tables in which the numbers should thus be generally found in excess are the Occupation Tables. The reason for the excess being found in these Tables and not in the others is, that the schedule of manufactures gives an *average* return of the number of "hands employed," while the statistics of occupations are taken from a count of individuals upon the population schedule, and present, therefore, a *maximum* return, embracing, as they do, artisans of

every class out of employment, temporarily disabled, or for some other reason not included in the actual return of any establishment.

The degree to which such excess should extend will depend, within certain limits, upon the nature of the special occupation, as well as upon the general condition of manufacturing industry throughout the country at the time. It should rarely, however, fall below six per cent. in any trade at any time, and it should quite as rarely go above sixteen per cent.

Whenever, therefore, the numbers returned in the Tables of Occupations do not exceed those under the same titles in the Tables of Manufactures by at least six per cent., and, on the other hand, whenever the former exceed the latter by more than sixteen per cent., there a discrepancy must be admitted.

And, first, of those cases where the numbers in the Tables of Occupations do not exceed those in the Tables of Manufactures by six per cent., or even fall below them.

Instances of this kind are principally confined to the returns of factory operatives. At the present census these instances are sufficiently marked to require explanation.*

A portion of these omissions, undoubtedly, may be accounted for by the large number (41,619) returned under the head of "Mill and factory operatives not specified," as well as by the number (20,242) of "Employés of manufacturing establishments not specified;" but, in the main, the explanation of the discrepancies is found in the fact, heretofore adverted to, that women and children employed in factories are omitted in large numbers.

Second. Those instances where the numbers appearing in the Tables of Occupations exceed those in the Tables of Manufactures by more than the probable or possible difference between a maximum and an average return. Unlike the class first noted, these discrepancies affect mainly the statistics of those occupations which are pursued singly, or by twos and threes, out of large mills and factories, and even, in a considerable degree, out of shops. Discrepancies of this character in no degree discredit the statistics of occupations. They arise from the fact that the return of "Productive Industry," under the census law of 1850, is not, as indeed it was not intended to be, a complete return of the mechanical production of the country.

The census attempts the enumeration of mechanical industry only as it is carried on in shops, and thus fails to embrace that large body of individual labor which is not attached to distinct "establishments of productive industry." Moreover, the census law establishes a minimum (namely, the value of \$500 annually) below which the production of shops shall not be returned; behind which unfortunate exception a host of minor establishments, producing in the neighborhood of \$500, take refuge and thus escape enumeration.

The scope of these omissions may be seen in the tables on pages 664 and 665 of Volume I of the Ninth Census. Larger omissions occurred at the census of 1860, (see Vol. I, Ninth Census, p. 665.)

The effect of this wholesale omission of the production of certain trades upon the aggregate value of manufacturing and mechanical products in the country has been discussed in the quarto volume on Industry.

Inasmuch as it is not the Tables of Occupations which suffer from the comparison, it will not be necessary to pursue inquiry further into this class of discrepancies in the present connection. The Tables of Occupations are incontestably accurate, in a high degree, in respect to these common trades.

An exception.—In making such comparisons as the foregoing, between the Tables of Occupations and those of Manufactures, care should be used that the titles taken for the purpose really correspond. In some cases, even those in which the apparent correspondence is the strongest, the quantities are in fact not commensurable. An example may be found in the brick and tile manufacture. It would seem, at first glance, that the "hands employed" should answer exactly to the "brick and tile makers" in the Tables of Occupations; but, in fact, a considerable portion of the hands employed in large brick-yards, exceeding, indeed, not infrequently, the number of craftsmen, are classed and known as common laborers, and are so returned in the census. The table on page 666 of Vol. I, Ninth Census, will show the scope of this exception. It will be seen that, while in two or three minor cases the number returned on the Tables of Occupations exceeds, as we are accustomed to expect, the number in the Tables of Manufactures, the proportion of common laborers employed in brick-yards where that branch of manufacture becomes considerable, (notably in the larger manufacturing States,) is so great as to raise the numbers in the latter tables considerably above those in the former.

Incomplete subdivision of employments.—In addition to the apparent deficiencies or discrepancies which have been noted, one general remark will suffice in explanation of

*At the census of 1860 the discrepancies of this kind were still more numerous and far more extensive. A single example will suffice. The Tables of Occupations characterize but a little over two thousand persons as connected with the woolen and worsted manufactures, while the Tables of Manufactures show that considerably more than forty thousand persons were engaged, upon the average, in these branches of manufacturing industry.

many of the entries in the tables, in respect to the accuracy of which question may naturally arise.

It must be borne in mind that the number of persons who are reported under a certain specified occupation does not necessarily embrace all the persons who perform the duties usually associated with that title, but only those who discharge such duties to the exclusion of other gainful occupations, or, at least, as their principal or sole professed means of support.

The organization of labor and the subdivision of industry vary in respect to completeness and minuteness with each successive community. As communities advance in industrial character, functions become separated, and distinct occupations become recognized. This country, from its peculiar conditions, presents almost every degree between the two extremes of industrial development in this particular. It is common to find on the returns from the present Territories, and even some of the present States of the Union, such entries as these: "Carpenter and miner," "Blacksmith and carpenter," "Blacksmith and miner." In many of the communities of the land it is difficult to draw distinctions much finer than those between the agricultural, the mining, the mechanical, and the commercial pursuit or profession. Indeed, even this is not always practicable, since it is matter of notoriety that in many of the States of the Union, and those not among the newest, the occupations of carpenter and farmer, or blacksmith and farmer, or farmer and fisherman, are frequently united in one person. In large and more prosperous communities a clear separation between such incongruous occupations takes place; yet, still, the carpenter, for instance, in nine out of ten counties in the United States, performs half a dozen functions which, in cities, are recognized as belonging to distinct trades.

The same general process occurs in agricultural, commercial, and professional employments; thus, the tables show 100,406 traders and dealers whose branch of trade is not specified.

The want of specifications in the case of this 100,406 is not due to the neglect of assistant marshals, but to the fact that these persons so characterized are actually selling agricultural implements, books and stationery, boots and shoes, &c., &c., through pretty much the entire line of articles sold by those other dealers whose departments are defined because the communities in which they dwell and deal are sufficiently large to allow of the subdivision of trade.

If, therefore, we look at those occupations which emerge as distinct employments only in communities where the organization of industry and the subdivision of labor are carried to a high degree, the number of persons engaged will appear to be impossibly small, unless the above considerations are borne carefully in mind.

ANOMALOUS ENTRIES.—Other seeming discrepancies, which demand at least an allusion here, occur where persons are returned as of certain special occupations in States where it is notorious that the industries represented are not carried on; or, again, where persons, not more than one, two, or five in number, are returned in a State under a description which implies a large body of workmen, as (in illustration of both these classes) when Ohio is returned as having one silk-mill operative, it being difficult to see how one operative could justify a silk-factory in Ohio, and it being, moreover, notorious, as matter of fact, that the manufacture of silk is not carried on in that State. An adequate explanation of all cases of this general nature is found in the consideration that the census takes account of persons where they are actually residing, and assigns them to their habitual occupation, whether it is being at the time pursued or not.

In the enumeration of tens of thousands of persons out of health, or out of employment, traveling, or visiting friends in other States, it is inevitable that such apparent anomalies should arise.

Nota Bene.—Each employment specified in the following tables must be understood in connection with the class or grand division of industry under which it is placed. To many, and, indeed, most of the specifications of occupation, this warning, in the nature of the case, does not apply.

Others, however, will be misinterpreted without a reference to the more general title. Thus, "clerks and copyists" appear under the head "personal and professional services" to the number of 6,138. These are clerks to lawyers, clerks to civil engineers, copyists not attached to commercial houses or manufacturing establishments, &c. "Clerks" also appear under the head of "Manufactures and Mining," so far as persons are employed in a purely clerical capacity in those branches of industry; while, under the title of "Trade and Transportation," "clerks" appear several times as "clerks in stores," "clerks in banks," "clerks in railroad-offices," &c. In such cases, "cross-references" will generally be found between the several parts of the tables where these entries occur.

TABLE LXVI.—Occupations: Fifty Cities—Periods of Life of Persons engaged in Each Class—1870.

REMARKS.—It is held by many persons conversant with the special subject, that the returns of the census in respect to the blind and the deaf and dumb, and also, in a higher degree, to the insane and the idiotic, are always, and necessarily, considerably below the fact. F. B. Sanborn, esq., of Massachusetts, late secretary of the board of charities for that commonwealth, has advanced the opinion that the numbers reported in the census, be it State or National, rarely embrace more than sixty or seventy per cent. of their respective classes.

The Superintendent certainly can claim not to be bigoted in his defense of the accuracy of the census as taken under existing laws, nor does he desire to exhibit a disposition to close, were it in his power, the discussion of this question by a dogmatic denial of the charge of large omissions in the returns of the Afflicted Classes of our population at the census.

It is fair to say, however, that the opinion referred to would appear to have been formed, in advance of anything like a general and systematic investigation, from impressions derived from casual observation or partial inquiry, and therefore to have hardly authority enough to withstand positive official statements.

(a) Does not include 5 born in Indian Territory and 37 the State of whose birth is unknown.

(b) Including 127 living in West Virginia.

(c) Including 127 born in Virginia.

Up to the time the above tables were sent to press, the sole attempt, known to the Superintendent, which had been made to supply absolute data by which to test the results of the census in this particular, was in Massachusetts, where a list, bearing a somewhat indefinite date, but formed between the State census of 1865 and the Federal census of 1870, had been prepared, of the deaf and dumb of the commonwealth.

This list contains an aggregate of 821 names. Examination, however, shows that while, for two or three years, names were added from time to time to complete it, only 18 names were, during that time, stricken from the roll, as lost by death or by removal from the State. Of course, among so large a number as 821, the casualties for such a period could not but have been far more numerous. It would certainly be fair to assume a

rate of mortality among the afflicted classes not below that of the community generally, after excluding infants of an age too early to allow such infirmities as are being considered to become developed and recognized.

Still further scrutiny of the list shows that the actual statement of the individual case in no small proportion of instances fails to bear out the title of the list itself. Thus, of the total of 821 persons, only 692 are distinctly and in terms put down as "deaf and dumb," while 41 appear as "dumb," 14 as "mute," 73 as "deaf," and 1 simply as "idiotic."

The Superintendent does not take the responsibility of saying that none of the persons reported as "mute" or as "dumb," or even of the larger number reported under the more questionable title of "deaf," were not deaf-mutes or deaf and dumb; but it is certainly fair to demand, in a list prepared solely with a view to this single consideration, something like accuracy of definition; and if accuracy of definition cannot be attained in so simple a matter, what reason to expect accuracy of description?

But the reductions above indicated are not the only ones to which this list must be subjected before it can fairly be put in comparison with the census returns of Massachusetts.

for 1860 and 1870. From entries in red ink, it appears that 117 names were added to the list, on account of the deaf and dumb of Massachusetts, found in 1867 among the inmates of the asylum for the deaf and dumb at Hartford, Connecticut. But by the census law the pupils of the Hartford asylum are required to be returned on the schedules for Connecticut, as having their "usual place of abode" therein; and, as a matter of fact, 118 persons, deaf and dumb, born in Massachusetts, were returned by the proper assistant marshal of Hartford, on the 1st of June, 1870, and will be found in the above tables. If, therefore, the 117, added as above to the Massachusetts list, be subtracted from the total number who were distinctly and in terms reported to the State board of charities as "deaf and dumb," we shall have but 575 who were, at any date that may be taken as the date of the list, whether 1866, 1867, or 1868, fairly sub-

ject to enumeration within the State of Massachusetts, according to the conditions of the census law. The number returned by the assistant marshals to the Census Office, on the 1st of June, 1870, was 538. The difference would be easily accounted for by the failure, already indicated, to follow up on the State list the changes from death or removal; and were this cause not sufficient, it would neither be an unfair nor a violent assumption that a list thus prepared by piecemeal, and exhibiting so much looseness both of definition and construction, might contain other important errors which would need to be corrected before the positive count of the census could be discredited through its instrumentality.

Since the corresponding tables of Vol. I (quarto, Nos. X to XIX) were sent to press, this office has received, by favor of the secretary of the Illinois State board of charities, the lists, prepared for or by that board, of the insane and the idiotic of that State. The list of idiotic has not been examined for the purposes of these remarks; but the list of insane has been subjected to a careful comparison with the returns of the census, name by name. This comparison exhibits such an utter want of correspondence, at nearly every point, as not only renders criticism impossible, but is, in itself, wholly inexplicable. The list of the board of charities contains 2,376 names. Eighty-eight might be deducted on various accounts: duplication, 41; death, 14; recovery of reason, 31; and removal from the

State, 2. In addition to the above, 6 are characterized as "idiotic," 32 are indicated by remarks as "probably recovered," "friends feel hopeful," &c., and 24 are marked "declined," which word is supposed to refer to the action of those in charge of asylums and to justify a doubt as to the fact of insanity. But after all reasonable allowance on these accounts, there would probably remain something like 2,250 insane persons in Illinois, by the count of the State board of charities. Only 1,621 insane persons were returned by the assistant marshals in the census, leaving the difference unaccounted for. Upon the mere statement of such a difference, it might reasonably be assumed that the assistant marshals of Illinois had failed to properly characterize, as insane persons otherwise reported upon their schedules. But a critical examination of the two lists and a comparison of names dispose of this assumption and leave the difference wholly inexplicable, except upon the ground of radical and total vice in one or the

other of the two lists being compared. Out of the total number of 2,376 names on the State list and 1,621 names on the census list, only 721 are found to be common to the two lists. Thus the State list contains 1,655 names which are not on the census, while the census contains 900 names which are not upon the State list. In the view of such monstrous discrepancies, it would be reasonable to assume that, inasmuch as the returns of the census are made by sworn officials visiting each house and family by turn, while the list of the State board of charities would appear to have been made up by no class of officials, and even by no distinct class of persons, the board must have been imposed upon, either through negligence or design on the part of its correspondents. This, which would appear to be the natural presumption upon the first statement of such discrepancies, is confirmed and rendered almost certain by the results of a careful search which has been instituted with a view to ascertaining whether the names of persons appearing on the State list as "insane" but not returned as such by assistant marshals, are to be found at all, in any connection, upon the schedules of the census, which, it should be stated, purport to present the name and personal description of every man, woman, and child in the community. Three hundred and ninety-nine names thus borne upon the State list as "insane," belonging to one hundred and

twenty-three towns and cities, were sought for throughout the entire body of the returns of their respective towns, covering a population of about half a million. Of this number only forty-five were found reported, as of any condition, on the schedules; and, in a considerable proportion of cases, no family of the same surname was found within the town to which the State list assigned the person for whose name search was made.

When, in contrast to facts like the above, it is stated that the census as an agency, whether State or National, is always steadily consistent with itself in respect to the numbers of the Afflicted Classes, never departing far from the ratios exhibited in the above tables, it must, the Superintendent thinks, be admitted that the figures of the census are entitled to full credence, until impeached by evidence more carefully and systematically gathered than any yet presented.

WEALTH, TAXATION, AND PUBLIC INDEBTEDNESS.

Valuation.—The schedule commonly known as the Social Statistics Schedule, annexed to the act of 1850, proposes ten distinct subjects of inquiry, viz: Valuation; Taxation; Churches; Schools; Libraries; Newspapers; Wages; Crops; Pauperism; and Crime. Of these ten heads, one, viz, Crops, was, as explained in the remarks which preface the Population volume of this census, stricken out of the schedule, as its proposed scope is more fully covered by the investigations of another office, viz: the Department of Agriculture. The place which it formerly occupied upon the schedule was devoted to an inquiry into State, county, and municipal indebtedness.

The results of the inquiries in respect to churches, libraries, schools, newspapers, pauperism, and crime, as bearing on the moral, social, and intellectual condition of the people, will be found in connection with the Statistics of Population. The Tables of Valuation, Taxation, and Indebtedness, constituting a part of the Industrial Statistics of the census, have been grouped with the Statistics of Production in the volume on Industry, and an abridgment of them will be found in the pages immediately following.

That part of the Social Statistics Schedule of 1850 which is devoted to the subject of Valuation has always been understood to require—

FIRST. A positive statement of the value of Real Property as *assessed* for purposes of State or local taxation.

SECOND. A positive statement of the value of Personal Property as *assessed* for purposes of State or local taxation.

THIRD. An *estimate*, by the officer making the return, of the True Value of both species of property combined. The phraseology of the schedule in this matter is most unfortunate, but it has always been understood (interpreted is hardly the word) to mean what is given above.

Inasmuch as the laws of some States exempt large amounts of personal property from taxation, while in others large classes of real property are so exempted; inasmuch, moreover, as the customs of assessment vary greatly in different States, and oftentimes in the several counties of the same State—in some the taxable value of the property not exempted by law being fixed at no more than a third of its recognized selling price; in others, at fifty, sixty, seventy, eighty, or ninety per cent.—it will be seen that the result of the first two inquiries is not to obtain the wealth of the several States and Territories, but to present merely the actual basis of State or local taxation: the amount, namely, in each State, county, or town, upon which a tax of five, ten, or fifteen dollars in the thousand might be levied. The utter want of uniformity in this matter of assessment for purposes of taxation cannot be too strongly insisted on. Without a knowledge of the laws in each community in respect to exemptions, as well as a knowledge of the customs of assessment in each, assessed values must always bear a very uncertain relation to real wealth.

That, then, which the first two inquiries under this head do not attempt to obtain, namely, the Real Wealth of the several States and Territories, it is sought to reach by means of estimates to be made by the officer immediately charged with the collection of the Social Statistics of the district or subdivision; and the results of this effort will be found in the proper column of the tables following.

As estimates on no subject can have any authority excepting such as is derived from confidence in the persons making them, or, if such estimates are put forth impersonally, then from confidence in the methods pursued, it is but right that it should be stated by what class of officers this part of the census work has been performed, and under what instructions from the central office they have acted. At the best, these figures represent but the opinion of one man, or of a body of men, in each State, acting under advice in the collection of material and in the calculation of the several elements of the public wealth.

From the following States and judicial districts the return of Social Statistics was made by a single deputy marshal specially commissioned for that duty, viz: California, Connecticut, Delaware, Indiana, Iowa, Kansas, Kentucky, Louisiana, Massachusetts, Michigan, Mississippi, Nebraska, Nevada, New Jersey, Eastern New York, Southern New York, North Carolina, Ohio, Oregon, Western Pennsylvania, South Carolina, Texas, Vermont, Wisconsin, Wyoming, and District of Columbia.

From each of the following States and judicial districts the returns of the Social Statistics were made by two or more deputy marshals specially commissioned for the service, viz: Alabama, Illinois, Missouri, Northern New York, and Eastern Pennsylvania.

In the following States and judicial districts the collection of the Social Statistics was, by the United States marshal, in his discretion, intrusted chiefly to the regular assistant marshals, each in his own subdivision, viz: Arkansas, Florida, Georgia, Maine, Maryland, Minnesota, New Hampshire, Rhode Island, Virginia, West Virginia, Arizona, Colorado, Dakota, Idaho, Montana, New Mexico, Utah, and Washington.

Where the duty of making these estimates of the true value of all species of property was charged upon assistant marshals, the merit of such estimates will, of course, depend upon the character of the marshal's general line of appointments. Where assistant marshals were selected from among the best citizens of the district,

their estimates, based on a more intimate local knowledge than was otherwise attainable, and with the advantage of a thorough personal canvass of the immediate region concerned, may be assumed to be reasonably just and close to all the facts and conditions of the case. The advantage of committing this duty to one or two officers in a State was found in the considerations—first, that this plan secured a greater uniformity of treatment; second, that, with the smaller number of persons engaged, it was practicable for the Census Office to confer more frequently and minutely with them in respect to difficulties encountered, and to communicate information or suggestions bearing on the subject; third, that it was possible by this method to secure officers of a distinctly higher grade for the performance of this duty.

The latter consideration was of prime importance for the purposes of a true valuation of the realized wealth of the country. Some of the gentlemen who consented to act in this capacity are of national reputation, while nearly all the appointees of this class brought to the work special qualifications and exceptional opportunities for the investigation.

The two points particularly dwelt upon in instructions from the Census Office in this matter of valuation were, first, the undervaluation of real estate in assessments for taxation; second, the large classes of personal property which,

- (a) By State or Federal laws are exempt from taxation; or,
- (b) By the habits of assessment are disregarded, (notably furniture, apparel, and equipage, and small amounts of money in hand or in bank); or,
- (c) By evasion or fraud escape assessment.

The investigations under the first head, as they have been known to the Census Office, have been searching and comprehensive. It is a great mistake to suppose that a uniform per cent. can be taken by which to advance the assessed values of real property throughout the country, or even throughout any one State, to reach the true selling-price. Not only are the variations to be calculated very great in every State, even after the nominal equalization which, in a few States, is effected by State boards constituted for the purpose, but the variations as between States are such as to deprive random statements as to the amount of undervaluation of all authority whatever. There are States in which the assessed value of the whole body of real estate does not fall short of its selling-price in a favorable market by more than ten per cent. In others the true value exceeds the assessed value by two hundred per cent., and even more; while between these extremes States are ranged without any perceptible order, certainly without any means of determining *a priori* their place in the scale. Hence, to say generally, as is so often done in discussions of the realized wealth of the country, "Add 30 per cent. for undervaluation," is the merest trifling. It is possible, however, so to conduct investigations in regard to each important section, by turn, as to reach results of real value, even though they take no more authoritative form than that of estimates. But that this should be so, it is necessary that they should be the estimates of judicious and well-informed men, known to have canvassed the whole field, with access to all official data existing, and acting in constant conference with each other and with a central office.

In a few States, notably several of the former slave States, both property and industry are in such a condition of uncertainty that it has only been possible to deal with the question roughly and approximately; but speaking generally for the majority of the States, and for the vast majority of the property of the country, the additions to be made to assessed values, on account of the undervaluation of real estate, have been calculated with great nicety by competent investigators.

No such accurate methods could, of course, be applied to the determination of the question how much should be added to the assessed valuation of the country on account of the exemption or escape of personal property from taxation. The result reached must, at best, be characterized rather as an *impression* than an *opinion*; but so long as this work was to be done at all, it was highly desirable that the impression should come from a study of the subject, and not from guessing at elements which had never been seriously considered.

One remark more will be appropriate before submitting these tables to criticism. No attempt has been made to eliminate that portion of the personal property of the country which is based on the value of real estate. To that extent, therefore, there is a duplication of wealth. The reasons why it was not deemed expedient to undertake the work of reducing the aggregate valuation of real and personal property by the amount of the latter, which merely represents the former, were as follows:

First. This duplication follows the general rule of State and municipal taxation. In nearly all the States of the Union land and buildings are taxed to their full (assumed) value, without deduction on account of mortgages, while the mortgages are also taxed at their full value. To obtain the aggregate value of both species of property, this duplication being admitted, is, therefore, to obtain the basis of possible taxation on prevailing methods of taxation, better than by excluding such duplicated values.

Second. This personal property representing real property is not always, perhaps not generally, owned in the immediate community where the real property is situated. Its exclusion, therefore, while it would more accurately present the realized wealth of

TABLE LXXX.—*Valuation of Property—1870-1860-1850.*

NOTE.—It has not been thought advisable to attempt a valuation of the property of the General Government, June, 1870, as appears in the report of the Secretary of the Treasury, was \$411,235,470. The national Secretary of the Treasury, was \$2,406,562,372; adding these amounts to the proper columns in this table, \$3,271,874,768.

the country as a whole, would lead to the grossest misrepresentations as between sections and States. Hundreds of millions are owned in the East in the form of mortgages on the real estate of the West. If these gigantic amounts are to be excluded from such tables as the following, they must be excluded as *personal property* from the valuations of the Eastern States. But to do so would be in the highest degree unjust. The wealth of these States consists in the value of their own real estate, their manufacturing, commercial, and banking capital, their furniture, apparel, and equipage, plus the claims they have upon the lands, buildings, and railways of the newer States.

Third. Even were it desirable, in view of the two considerations here presented, to eliminate the element of duplicated valuations, it will appear, on reflection, clear that

TABLE LXXX.—*Valuation of Property—1870-1880-1880.*

ernment. The total of receipts into the National Treasury for the fiscal year ended on the 30th day of debt, less the amount in the Treasury on the 1st day of June, 1870, as appears in the statement of the the aggregate public income of the country becomes \$588,380,435, and the aggregate public indebtedness

the difficulties in the way of anything approaching an accurate determination of the amount to be excluded would be almost insuperable.

On all these accounts it was believed that it would be far more satisfactory to aggregate the totals of real and of personal property as separately obtained, without any inquiry how far the value of one merely represents the value of the other.

Public indebtedness.—It is, of course, impossible to introduce into such statements of public indebtedness as are contained in Table LXXXII and in the last division of Table LXXXIII anything like uniformity in the treatment of contingent liabilities.

In some States the treasury is contingently liable, in an amount far exceeding the proper debt of the State, for the payment (in some cases of the principal and in others

(a) Returns of taxation incomplete.

(b) No returns of taxation.

of the interest) of bonds issued by, or in aid of, railroad and other companies; the security given for the payment of such obligations at maturity, by the companies themselves, varying in quality from the highest to the lowest. It is hardly necessary to say that the same difficulty attends the statement of the debt of the United States, by reason of the aid extended by the Government in the construction of certain railroads.

A second obstacle to uniformity in such statements is found in the fact that in many States the bonds of the State are held in trust, in large amounts, by officers representing various special interests of the State itself. For example, the securities of the educational funds in one-half the States consist largely, if not principally, of State bonds. To determine in which of these States, at any future time, or under all reasonable contingencies, provision would be made for the payment of the interest or principal, and in which of the States, in times of financial embarrassment or under possible political conditions, the interests of education would be left to suffer, would be invidious even if it were practicable, but will be seen at a glance to be wholly impracticable and hopeless.

TABLE LXXXII.—Public Indebtedness—1870.

(a) Included in Virginia.

In view of the difficulties thus briefly stated, (and others might be cited,) it has been thought best to express the debt of each State in the following tables at the amount recognized by the proper officers and authorities of the State as constituting its debt, and to accompany the statement by such explanations and such additional information as may be necessary to enable any person so disposed to work out the statement of indebtedness upon a uniform rule, either inclusive or exclusive of all contingent liabilities, (without reference to the quality of the security;) or, again, either inclusive or exclusive of all sums owing from the treasury to some department of the State itself. It is true that this plan may involve considerable differences in the treatment of the subject of State liability, due not so much to differences in the character of the security in the several cases, as to the somber or sanguine disposition of the officers immediately in charge, or to temporary embarrassments, or to the traditions of an auditor's or a comptroller's office. [For special remarks respecting each State and Territory, see pages 6 and 7 of Vol. II., Ninth Census.]

REMARKS UPON THE STATISTICS OF AGRICULTURE.

Extracts from the pamphlet of "Instructions to Assistant Marshals" in explanation of these tables:

"FARMS, for the purposes of the Agricultural Schedule, include all considerable nurseries, orchards, and market-gardens, which are owned by separate parties, which are cultivated for pecuniary profit, and employ as much as the labor of one able-bodied workman during the year. Mere cabbage and potato patches, family vegetable-gardens, and ornamental lawns, not constituting a portion of a farm for general agricultural purposes, will be excluded. No farm will be reported of less than three acres, *unless* five hundred dollars' worth of produce has actually been sold off from it during the year. The latter proviso will allow the inclusion of many market-gardens in the neighborhood of large cities, where, although the area is small, a high state of cultivation is maintained and considerable values are produced. A farm is what is owned or leased by one man and cultivated under his care. A distant wood-lot or sheep-pasture, even if in another subdivision, is to be treated as a part of the farm; but wherever there is a resident overseer, or a manager, there a farm is to be reported.

TABLE LXXXIV.—*Farms: Number and Acreage—1870-1860-1850.*

LAND IN FARMS—ACRES.			Percentage of unimproved land in farms to total land in farms.			AVERAGE SIZE OF FARMS.

"By 'Improved Land' is meant cleared land used for grazing, grass, or tillage, or lying fallow. Irreclaimable marshes and considerable bodies of water will be excluded in giving the area of a farm improved and unimproved. In reporting 'Live-stock,' columns 12, 13, and 14, sucking-pigs, spring-lambs, and calves will be omitted.

"In the 'Produce of the year' will be included the total of all crops, &c., whether consumed at home or sold off the farm.

"By 'Clover and grass seed' is intended only that which has been cleaned for use or prepared for market.

"Under 'Home manufactures' is to be included the value of all articles manufactured on the farm, whether for home use or for sale, when the same has not been reported among the products of industry, (Schedule No. 4.) The value of materials purchased for such manufactures will be deducted.

"The total value of 'Annual production,' column 52, is intended to exhibit the total results of all the labor of the farm during the year, whether in the production of crops, in additions to stock, in fencing, or in improvements of any description, so far as the same are due to farm labor. Building, fencing, &c., by professional mechanics, will not be included. Neither will a speculative rise of land, nor an enhancement of values by the opening of railroads, &c., be reckoned in the annual production of the farm."

The Census agricultural year.—The first question, logically, which arises in respect to what purports to be a statement of annual production, viz: "What is the year covered by the report?" is one which it is impossible to answer in respect to the tables of agricultural production in the census of the United States. The schedule annexed to and made a part of the law of 1850 requires the products of each farm in the United States "for the year ending June 1." But there is no agricultural year ending June 1. The division made by the law is a purely artificial one, and cuts the agricultural year in twain.

As a matter of fact, as the census under existing laws always has been and always will be taken, the production returned is not the production of any one year distinctly, but is made up, without any determinable proportion, indifferently from the production of two years.

The enumeration at the Ninth Census, for example, beginning upon the 1st of June, 1870, assistant marshals obtain for a month or two the production of 1869 in the main, although in some sections many of the crops (notably hay, wool, and some of the grain crops) are already so far advanced that the farmer is quite as likely to estimate his an-

portions, earlier in some parts of the country than in others, and earlier in respect to some crops than to others in the same section. As the work is protracted through November and December, and, through the utter want of control at the central office, is allowed to drag, in some counties, through January and February, the crop of 1870 becomes the only one that is in contemplation of either the farmer or the assistant marshal in filling up the agricultural schedule.

Number and size of farms.—The preparation of the tables distributing the total number of farms returned at the census into classes, according to the number of acres of improved land in each, has been attended with unusual difficulty at the present census, in consequence of the extraordinary and wholly anomalous condition of agriculture at the South. The plantations of the old slave States are squatted all over by the former slaves, who hold small portions of the soil, often very loosely determined as to extent, under almost all varieties of tenure.

In the instructions to assistant marshals in preparation for the census, and during the early days of the enumeration, efforts were made to impose something like a rule

which should govern in the returns of agriculture at the South; but after a weary and unprofitable struggle the Superintendent was fain to accept whatever could be obtained in regard to the agriculture of that region, without greatly criticising the form in which it came. To have insisted upon a logical treatment of the subject would have been equivalent to giving up the agricultural statistics of the year.

For the reasons above stated it became necessary to distribute among the several classes, in the tables under discussion, a great number of farms, in each of the former slave States, of undetermined acreage. The plan adopted has been to treat all such farms as being of more than three* and less than ten acres. Undoubtedly, in ninety-nine out of every hundred instances, this assumption answered to the real facts of the case. Of the remainder it is enough to say that nothing better could be done with them under the most unfortunate circumstances attending the enumeration.

* Less than three acres not constituting a farm for census purposes, with a single class of exceptions only occurring in the immediate neighborhood of large cities, with land in a high state of cultivation.

A comparison of the number of acres of land in farms in 1870 with that in 1860 will show that the only States in which there has been a falling off in the amount under cultivation are, first, those in which slavery existed in 1860, and in which conditions growing out of the change in the system of labor have prevented a complete rehabilitation of agricultural industry; or, second, those of New England, in which the decrease is mainly due to the extension of manufacturing towns and villages; or, third, as in the case of New Mexico and Virginia, where territory has been set off to create new States or Territories.

The limitations of agricultural statistics.—The agricultural statistics of the United States, under the present census law, being obtained by the visitation of each farm in turn, attain a high degree of accuracy in respect to all crops which are of considerable importance, either for the whole country or for the particular section under enumeration.

The above qualification expresses quite exactly the principal limitation of the agricultural statistics of the United States. The census has little authority in respect to minor productions. Where a crop is of small importance, or is only occasionally cultivated, the assistant marshal will naturally and almost inevitably fail to put the question at every house. The farmer, on the other hand, on account of its little import-

ance among the products of the year, will fail to mention it, and the result will be an inadequate representation of that crop.

So general and positive is the law of the human mind under which such omissions take place, that some of the inquiries of the Agricultural Schedule might just as well be dropped. The results are hardly worth publishing, and, if taken without the present qualification, are calculated only to deceive.

This much is true, however, that certain crops which are only rarely cultivated, and that in small amounts, in the great majority of States, and are therefore in those States inadequately represented, become of importance in some single section and are there returned with reasonable completeness. If, then, due allowance be made for the omissions in the sections where the crop is of little account, a very tolerable result for the entire country may be reached.

This frank admission in regard to the slight value of the statistics of the census in respect to the minor crops should have no effect to disparage the authority of its statements in respect to the staple products of the country as a whole, or of any section. The very laws of mind by which the former lose even the slight attention they deserve, give the strongest assurance for the general completeness and correctness of the latter.

A second limitation of the agricultural statistics of the census is found in the inapplicability of the schedule to sections in the condition of the several Territories, as also of the State of Texas, and some portions of the States of California, Kansas, and Nebraska. That schedule was framed wholly with reference to the agricultural requirements of the older States, where the land is divided up into well-defined farms, and the operations of a comparatively advanced agriculture are systematically carried on. It is utterly inadequate to represent the grazing industry of the great plains beyond the Missouri, and the results in respect to this region might, perhaps, have been omitted from the publication with credit to the census.

Wool.—The census statistics of wool for the Seventh and Eighth Censuses have been severely criticised by "the trade" on account of the low average clip per head reported throughout the country, and more especially in certain of the States.

It is doubtful whether the average yield of wool, as shown by the ratio between the number of sheep returned in the census and the number of pounds of wool returned, will ever reach the average weight of fleece as reckoned by the trade. This is due, unquestionably, in part to the fact that the average taken by the wool-brokers for the

HORSES AND NEAT CATTLE.

purposes of this comparison is the average under favorable conditions. Still, it must be admitted, as the result of candid investigation, that the figures of the trade have been much nearer to the truth than those of the census, in this particular, in the great majority of States. In certain of the States, however, (notably those of the South,) issue must be taken with the statements of the trade. It is not questioned that single flocks of sheep, receiving adequate care and attention, and kept with a view to the wool product, in any one of these States, might, under fortunate conditions, yield an average weight of fleece equal to what is claimed. But a very extensive correspondence conducted by the Census Office—more extensive, unquestionably, than any ever conducted by private parties—enables the statement to be made with confidence that in some of the Southern States a large portion of the sheep owned are not kept with a view to the wool product, and are actually not sheared. So general is this as to reduce the aggregate clip in those States more nearly to the figures of the census than to those of the trade.

In all the States, however, where sheep are kept in considerable numbers for the sake of the wool crop, and in the Northern and Western States generally, there is no doubt that the return of wool in previous censuses has been partial, and the average weight, therefore, brought below the undoubted facts of the case. This has been due

partly to the fact that all wool used in "Domestic manufactures" (as returned upon the Agricultural Schedule under the law of 1850) is properly excluded, in order to avoid a duplication of value; also, to the fact that the aggregate number of sheep is made up in part of very small flocks, or single animals, whose product of wool is so inconsiderable that it is never marketed, or, if marketed, escapes mention among the farm productions of the year; also, to the fact that large numbers of sheep are sold to butchers, who in turn sell the wool on the skin, making no return of any portion of their industry upon the Schedule of Agriculture; also, probably, to the fact that in spite of instructions from the Census Office, a considerable number of spring lambs are included in the report of sheep, thus reducing the average yield; also, probably, to the fact that a portion of the wool returned was either cleaned before being sold from the farm, or was stated by the farmer "discounted," according to the usual loss in cleaning. Of these five causes, the second and third are by far the most influential. For the purpose of ascertaining the extent of omissions to return wool where sheep

† See table on page 691.

are reported, the Agricultural Schedules of 1860 for the State of Iowa have been carefully examined, with the result that 2,416 farms, with an aggregate of 24,067 sheep, (out of a total of 259,041,) were found for which no production of wool was returned. In a very small proportion of these cases the sheep may have been brought upon the farms after shearing-time, and consequently their product would be embraced in the return of other farms; but, after all reasonable deduction on this account, the fact would still remain that no product of wool was returned for at least eight per cent. of the sheep owned in this State at the last census. [For table of sheep and wool with the average clip at the censuses of 1870 and 1880, see page 691.]

Horses and cattle not upon farms.—The census law of 1850 makes no provision for enumerating live stock not found upon farms. As a consequence, the returns on the Agricultural Schedule fail to include the large number of horses and yoke-oxen which are kept in cities, towns, and villages for draught or driving, and also to include the not inconsiderable number of milch-cows found in cities, towns, and villages, as above,

as well as those belonging to persons following commercial, mechanical, or professional pursuits in agricultural regions.

At the census of 1850 no effort appears to have been made to supplement the returns of live stock on the Agricultural Schedules by any calculation or estimate of the number not upon farms.

At the census of 1860 assistant marshals were requested, each in his own subdivision, to prepare estimates of the number of animals, of each recognized class, not found upon farms in the course of enumeration. This request appears to have been quite generally complied with. The results will be found upon page 192 of the Agricultural volume of that census.

No effort of this kind has been made at the present census; but the Superintendent has sought to place himself in possession of all statistical data of a positive character in existence upon this subject, and by comparison of these data, and with consideration of the varying conditions of settlement and employment in each section, to prepare himself to make an intelligent estimate of the number of horses and of neat cattle, respectively, omitted from enumeration by reason of the defect noted in the census

law. In some cases statistical data of a high character were accessible in the form of State censuses, or reports of State auditors made up from the returns of local assessors. The number of such animals in nearly fifty important cities was accurately determined by reports from the police authorities, and many towns and villages, and some rural counties in States not furnishing other official data, were canvassed with reference to this subject. The known habits and conditions of settlement, society, and occupation in each State became also elements of great importance in these computations. The result of these processes will be found in the table on page 697. The large relative falling off in the live stock of the country between 1860 and 1870 is due in great part, if not entirely, to the tremendous waste of four years of war.

Cheese and wine.—It should be observed that the cheese returned among the productions of agriculture includes only the cheese made upon the farm. The product of cheese-factories will be found in the proper place in the Statistics of Manufactures.

In the same manner the production of wine will be found both in the tables of agriculture and manufactures, according as the wine is made upon the farm or vineyard,

and consequently by agricultural labor, or in large establishments of a purely manufacturing character.

Animals slaughtered.—For the same reasons that the statistics of agriculture are uniformly inadequate for the Territories, and for sections of Kansas, Nebraska, California, and perhaps the whole of Texas, the returns of "Animals slaughtered and sold for slaughter" from those regions will fail generally to include the flocks and herds that graze over fields and plains not embraced in defined farms. Thus the aggregate of all the returns under this head for the Territories and for the States named is only \$17,171,046.

Unfortunately there are not sufficient data within reach to enable one to form even an estimate of the values thus omitted. There is also a considerable loss in the older States from the fact that large numbers of cattle are sold from farms to traders and speculators, to be turned into beef at one time or another, as occasion may serve or necessity require, or the market justify, while yet the farmer cannot properly report them as "Sold for slaughter," as he can know nothing of the plans of the purchaser.

Notwithstanding this liability to omission, the returns under this head for 1870 show

a handsome increase from the last census, aggregating \$393,956,376, against \$213,618,692 reported in 1860.

The cotton crop.—From the joint effect of two of the causes above indicated, viz, the anomalous conditions of land in the Southern States, and the splitting of the agricultural year by the artificial date given to the enumerations of the census, it might be expected that the return of the cotton crop in the census would be peculiarly liable to objection. The aggregate crop returned to the Census Office has been 3,011,996 bales. Taking into account the period fixed for the enumeration, (June 1, 1870,) it will be seen that this is substantially the crop which was planted between February and May, 1869, harvested between September, 1869, and February, 1870, and marketed between September, 1869, and September, 1870. It should be added that the bale recognized in the census law of 1850 was the bale of 400 pounds.

Aggregate value of farm production.—The inquiry by which this value was obtained was, as explained in the report of the Superintendent, prefixed to the Population volume, introduced into the Agricultural Schedule at the present census.

The reasons which appeared to justify this innovation were found in the difficulty

which has attended, and the ill-success which has followed, every attempt to reach anything like the true aggregate value of the farm production of the United States by means of the incomplete, and withal somewhat fragmentary, data furnished in the amounts given in the census of certain crops, embracing, it is true, almost all of the staples of the country, and some of less importance, yet far from covering the entire field of American agriculture.

Whenever efforts have been made to fix an average price for each of these reported products, and to supplement the statement by the value of the minor and miscellaneous products of the year, the result has invariably been a failure, more or less conspicuous. No estimate of the agricultural productions of the United States is known to the Superintendent which is entitled to much more than the credit of good intentions.

The cause of this failure is not found alone in the want of data by which to reach the sum of the numerous and, in a few cases, the considerable elements of production which are not recognized on the schedules of the census. The degree of error to which estimates in respect to these are liable is perhaps not greater than the probable error in calculations of value from quantity in the case of the products which do appear on

the schedules. It is no exaggeration to say that to fix a true average price for any crop cultivated in as many as half of the States of the Union, would be a work of not less difficulty than to fix the true center of population of the United States. That this would be so, were scientific precision required, would probably not be questioned. But it may be thought that it would yet be practicable roughly to determine the average price of such an article, with such limits of error only as would be inappreciable when applied to the entire crop, or would be offset by errors in an opposite direction during the further course of such calculations. Such, however, is far from being the fact. There is no crop named on the census schedules, cultivated in as large a number of States as that mentioned, for which an average farm-price could be fixed with the least approach to accuracy, while from the degree of uncertainty that prevails in respect to the entire schedule, as well as in regard to the elements omitted from enumeration, an error of from five hundred to a thousand millions would be pretty much a matter of course.

In the foregoing remarks reference is made to such estimates as have sought to obtain

the value of the agricultural products of the country to the agricultural interest purely; the value of the farm production to the farmer; the value of the crops of the United States before the elements of transportation and exchange have been introduced. It is easy, from daily quotations, to reach an average price of any single commodity in any one of the principal markets of the country; it is even possible to reach an average price, which shall be based not only on the several market averages attained, but also to a reasonable extent, upon the amount sold at each such local average; but to tell how much of the aggregate value thus reached has remained in the hands of the farmer is quite another matter.

The Superintendent has no desire to pursue this subject further than to show at once the novelty and the importance of this new feature of the census; nor is it necessary to multiply illustrations to accomplish this result. It is sufficient barely to allude to such notorious facts as corn selling in New England at 90 cents and being burned for fuel in Iowa; wheat selling at \$1.35 in New York, and for 45 cents in Minnesota; beef

bringing \$7 a hundred on the hoof in the East, while cattle are being slaughtered for their hides in Texas.

The total value of farm production reached in the above tables is believed to be as correct, for the great majority of the States and counties of the Union, as any statistical result can be expected to be. Here and there an assistant marshal may have slighted this portion of his duty; but in general the work has been well done. The product of each farm has been estimated upon the spot at its actual worth to the farmer, the officer of the Government and the owner of the land sitting down together to make out the statement. The aggregation of these results for two million six hundred and fifty thousand farms yields a total which must be taken as the most accurate determination of the value of the agricultural production of the country ever attained.

TABLE XCIII.—Live Stock on Farms—1870*—1860.

States and Territories.	1870

The scope of these statistics.—The above tables purport to exhibit the production of every mill, factory, or shop in the United States in which any class of mechanical industry is carried on to the extent of producing the value of \$500 a year. Inasmuch as, with ruling prices of labor and materials, few able-bodied artisans working ten months in the year but produce to the value of \$500, these tables should comprise all the results of substantially all the manufacturing and mechanical industry in the country. Between this, the theory of the case, and the facts exposed to criticism in the above tables, will be found a difference so great as only to be accounted for by a full explanation of the mode of collecting these statistics. (See page 372 *et seq.* of Vol. III, Ninth Census.)

The period covered by the returns.—It needs to be borne carefully in mind, in the use of the above tables, that the period covered by the returns is the twelve months from June 1, 1869, to May 31, 1870, inclusive. The fluctuations of productive industry are so incessant and so extensive, that it is necessary to fix precisely the period covered by any statement before tests can be applied to ascertain its completeness and accuracy. Especially in the United States, where these fluctuations are far greater than in older manufacturing countries, is it essential to observe this caution. It often happens that the comparison of two twelve-months periods, having so many as ten or eleven months in

common, will exhibit important differences caused by the eleventh or twelfth month, or both.

Capital invested in manufactures.—The census returns of capital invested in manufactures are entirely untrustworthy and delusive. The inquiry is one of which it is not too much to say, that it ought never to be embraced in the schedules of the census; not merely for the reason that the results are, and must remain, wholly worthless, the inquiry occupying upon the schedules the place of some technical question which might be made to yield information of great value, but, also, because the inquiry in respect to capital creates more prejudice and arouses more opposition to the progress of the enumeration than all the other inquiries of the manufacturing schedule united. It is, in fact, the one question which manufacturers resent as needlessly obtrusive, while, at the same time, it is perhaps the one question in respect to their business which manufacturers, certainly the majority of them, could not answer to their own satisfaction, even if disposed. No man in business knows what he is worth—far less can say what portion of his estate is to be treated as capital. With respect, indeed, to corporations having a determinate capital stock, the difficulty of making a correct return in this particular becomes very much reduced; yet, even here, the difference caused by returning such capital stock at its nominal value on the one hand, or at its actual selling-price on the other, whether above or below par, might easily make

a difference of 50 or 75 per cent. in the aggregate amount of capital stated for any branch of industry.

Where, however, business is carried on outside of incorporated companies, the difficulty of obtaining even an approximate return of capital, resulting from the nature of the inquiry itself, irrespective of the reluctance of manufacturers, becomes such as to render success hopeless. So numerous are the constructions, possible and even reasonable, in respect to what constitutes manufacturing capital, that anything like harmony or consistency of treatment is not to be expected of a large body of officials pursuing their work independently of each other. The Superintendent is free to confess that he would be puzzled to furnish a definition (fit for practical use by enumerators) of manufacturing capital, or, even in a single case, with complete access to the books of a manufacturing establishment conducted by two or more partners, and with the frankest exhibit of the assets, both of the firm and of the individuals thereof, to make up a statement of the capital of the concern, in respect to which he would feel any assurance. When to such difficulties in the nature of the subject is added the reluctance of manufacturers to answer an inquiry of this character, it may fairly be assumed, in advance of any enumerations, that the results will be of the slightest possible value.

It is greatly to be regretted that the census should be incumbered by an inquiry yielding so little, yet provoking so much opposition to the progress of the general work.

The aggregate amount of capital invested in manufactures in the United States, as by the following tables, is \$2,112,208,769. It is doubtful whether this sum represents one-fourth of the capital actually contributing to the annual gross product of \$4,232,325,442.

It is a pity, and may almost be said to be a shame, that statistical information, in

TABLE XCVIII.—*Manufactures, by Totals of States and Territories—1850.*

NOTE.—This table is an exact reproduction of Table 4 of the Abstract of Manufactures at the Seventh Census. [Senate Ex. Doc. No. 39, 2d session 35th Congress.] The table is arithmetically imperfect, and it is not known whether the errors are in the items or total of the table, or in both. The true total line of the items as printed is: Establishments, 123,025; hands employed, total, 925,079; male, 732,137; female, 225,922; capital, \$533,245,351; wages, \$236,755,464; materials, \$555,174,330; products, \$1,019,106,616.

many respects, of high authority and accuracy, should be discredited by association with statements so flagrantly false, even to the least critical eye; yet, as the manufacturing schedule annexed to the act of 1850 requires this return, and as there is a vague popular notion that the statement of capital in this connection is of real and great importance, (instead of being, as it is, at the best, of the least consequence,) the Superintendent does not feel at liberty to withhold the results from publication; but he feels not only authorized but required by the facts of the case to brand them as he has here done, in order that no one may be deceived by the show of authority they present.

The relation of wages to product.—In reference to certain of the common trades, it needs to be stated, in explanation, that the apparently inadequate amount of wages reported is due to the fact that a very large body of labor is included which is not represented in the wages column. Thus, the statistics of carpentering show that, for a total production of \$132,901,432, (the value of materials being \$65,943,115,) the amount of wages paid was only \$29,169,588. The consideration above noted is sufficient to account for the seeming deficiency, inasmuch as the labor of proprietors of establishments in this line (certainly not less than 17,142, and probably rising to 20,000) was compensated, not out of the wages paid, but out of the profits of the business. In some branches of industry the number of "hired hands" is even less than the number of artisans working in their own shops, and, hence, receiving no wages, but living off the profits of manufacture.

Relation of materials to product.—The relation of materials to product, in the Statistics

of Industry, needs to be carefully borne in mind; otherwise the most mistaken views of the importance of the several branches of industry will result.

The manufacturing, mechanical, mining, and fishing industries may be grouped in respect of the value of materials into five classes:

First. Those industries in which the subject-matter of labor is taken as of no value, and the value of the "materials" reported is made up of the mechanical and chemical appliances with which that subject-matter is treated. This is true of pretty much the entire body of mining and fishing industries. The ores in the rock or in the soil, the fish in the sea, are taken, and properly so, as of no value for the purposes of these statistics. The royalty paid to the owner of the mine in the one case, the license taken out by the fisherman in the other, are not included in the value of materials. In some cases the appliances, chemical or mechanical, are of the simplest kind, and are consumed in very small quantities; in others, they become very extensive and costly; but, through all this class, it remains true, as a rule, that it is labor, and the risk and use of capital, which make up the chief cost of production.

Second. Those industries in which the subject-matter is of a distinct and immediate commercial value, but the property does not reside in the person who treats it. In these cases, still, the value of the subject-matter treated is not embraced in the return of materials. A familiar illustration is that of horse-shoeing. It would be the height of absurdity for the smith, for example, to return the value of unshod horses among his

"materials," and the value of the same, when shod, in his product. The census assigns, as the materials of his industry, merely the coal, iron, steel, &c., used, and, as the value of his product, merely the price of the personal service he renders, plus the cost of those materials. In the same category are many of the trades. The returns in respect to the industries of painting, plastering, and plumbing, for example, do not take into account the value of the houses, stores, factories, &c., before and after these operations, but regard only the added value given as the product, and, in the same way, only the paints, the plaster and lime, the tubing, iron, and brass-ware, &c., used, as the "materials" of these industries.

Third. Those industries in which the entire value of the subject-matter is carried into the value of "materials," and appears again in the product enhanced by the value of labor, by the charges for the use of capital, for rent, freight, &c.; but in which the value of such subject-matter is small, compared to the cost of labor. The cabinet-maker takes a few dollars' worth of woods, coarse or fine, and works this material up into articles bearing ten times the value. The cutler takes a few pounds of steel, and produces edged or pointed instruments of high cost, because of the time and skill required in their fabrication. In all these cases the value of the product is not greatly enhanced by the fact that the entire subject-matter of the industry is included.

Fourth. Industries which are otherwise under the same conditions as those of the third class, but in which the value of the materials approaches, or even moderately exceeds, the value of the labor employed, and becomes thus an important element in the

[Continued from page 811.]

final value of the product as reported, enhancing the apparent production of the industry in a high degree. Here come in the great body of the industries known technically as the "manufactures" of the country, the mill and factory industries, whose productions appear oftentimes enormous, as compared with those of bodies of craftsmen more skilled, and receiving higher wages, and do so merely because of the high cost of the materials consumed in the former case.

Fifth. Industries in which the value of the materials far exceeds all the other elements in the cost of production combined, and thus carries up the apparent product of these industries to a very high point, although, in fact, comparatively little value has been added by these operations, and only a small number of artisans or laborers supported.

The reduction of gold and silver, calico-printing, bleaching and dyeing, the currying of leather, the packing of meat, the refining of sugar and molasses, and the production of flour and meal, are among the most important industries of this class.

The distribution of the industries embraced in Table VIII (B), as nearly as possible, according to the classification just indicated,* yields the following instructive results:

Relation of Wages and Materials to Product in Manufacturing, Mechanical, Mining, and Fishing industry.

Class.	Hands.	Wages.	Materials.	Product.
I.....	169,691	\$73,438,952	\$14,418,908	\$143,136,092
II.....	110,504	35,689,863	67,850,482	154,692,177
III.....	388,924	107,118,533	183,543,034	535,457,704
IV.....	1,453,056	541,078,362	1,529,537,058	2,701,440,948
V.....	101,504	31,734,815	707,361,378	841,003,063
	2,223,679	849,060,545	2,502,710,860	4,375,762,584

Class.	Excess of product over materials.	Excess of product over wages and materials.	Wages in \$100 of product.	Materials in \$100 of product.	Wages & materials in \$100 of product.	Product per capita, gross.	Product per capita, deducting materials.
I.....	\$128,717,784	\$55,278,832	\$51.30	\$10.07	\$61.37	\$843.51	\$758.54
II.....	86,841,095	51,151,812	23.07	43.86	66.93	1,400.00	745.87
III.....	351,944,670	184,826,137	31.20	34.23	65.48	1,376.84	904.92
IV.....	1,171,003,290	630,825,528	20.19	56.63	76.91	1,850.10	806.51
V.....	133,643,685	101,908,870	3.77	84.10	87.87	8,285.44	1,318.64
	1,873,051,724	1,023,901,179	19.40	57.19	76.50	1,967.60	842.32

Two common trades, each of which belongs partly to the second and partly to some other class, were divided for this purpose, in such proportions as seemed due. All the other industries in Table VIII (B) were assigned entire to one class or another, according to the principles indicated in the text. The lines of division taken for the third, fourth, and fifth classes were, 1st, where the value of the materials is less than two-fifths of that of the ultimate product; 2d, where the value of the materials is from two-fifths to four-fifths of that of the ultimate product; and 3d, where the value of the materials is over four-fifths of that of the ultimate product.

[Continued on page 872.]

TABLE CI.—*Manufactures, in each State and Territory, by Selected Industries—1870.*

NOTE.—In the construction of this Table, to save space, two classes of Industries have been excluded (1.) Those which may be called "neighborhood industries," i. e., when production is presumably for use and consumption within their immediate locality. These industries are blacksmithing, custom boot and shoe making, butchering, carpentering, brick and stone masonry, the manufacture of gas, locksmithing and bell-hanging, millwrighting, house-painting, paperhanging, photographing, plastering, plumbing and gas-fitting, watch and clock repairing, wheelwrighting, mechanical dentistry, custom grist-milling, and the sawing of lumber at small mills producing under \$2,500 annually. (2.) All industries in any State or Territory, whose aggregate annual product for such State or Territory falls short of \$250,000.

THE STATE OF ALABAMA.

[Continued from page 847.]

Examination of the table within the text on page 847 shows that the first class of industries, with a reported gross product of \$143,000,000, yields a net product only \$5,000,000 less than that of the fifth class, which has a gross product of \$241,000,000, while the wages paid in the first class exceed those paid in the fifth by 131 per cent. Nothing, perhaps, could set in a stronger light the necessity of considering all statements of manufacturing production in connection with the value of materials consumed and the cost of labor. Here are two groups of industries, the one reaching the gigantic total of \$841,000,000, the other aggregating but one-sixth as much; yet the latter makes a clear addition to the wealth of the country equal to 96 per cent. of the net production of the former, and actually pays more than twice as much in wages.

The calculations which have been added to show the number of dollars' worth of wages and of materials, separately and combined, in each hundred dollars of product, and also the average value of production, gross and net, to each hand employed, are well worth studying.

It appears that the value of the materials consumed in the several groups of industries range from \$10.07 to \$84.10 in each \$100 of product; that the amount of wages ranges (going, so to speak, in the opposite direction) from \$51.30 to \$3.77 in each \$100 of product, while the gross product per capita ranges from \$843.51 to \$8,285.44, and the net product ranges from \$758.54 to \$1,316.64. The reason for these astonishing differences is not found chiefly in any difference in the quality of labor, or in the more extensive application of machinery in one class than in another, but, almost wholly, in the treatment of this subject of the materials consumed in the successive industries and classes of industries.

Defects of the census law.—The Tables of Manufacturing Industry probably show more clearly than any other conspicuous portion of these volumes the importance of additional legislation in respect to the census. The industry of the United States has

[Continued on page 885.]

TABLE CII.—Groups of Principal Industries, by States and Territories—1870.

NOTE.—Each of these groups is a combination of certain of the Industries specified in Table XCIX. Such combinations as are here attempted must, at the best, fall short of theoretical exactness, and in some cases will be found only approximately correct. For example, in dealing with the group of industries producing building-materials, it is wholly impracticable to separate from the manufactures of iron those parts which go to the building of houses, stores, factories, bridges, &c., and the group is, therefore, left incomplete to just this extent. Again, in the group dealing with the preparation of food for man, foreign elements are manifestly included to a small extent, as in the case of provender for horses and cattle, embraced in the productions of grist and flouring mills. Many other such instances might be noted. Still, it is believed that these combinations will be found highly convenient for many of the purposes to which the statistics of production are applied, and that substantial accuracy may be claimed for the results, after the one broad exception has been made as to the completeness of the returns relating to the common trades of carpentering, painting, plastering, and plumbing.

BRASS, CAST AND ROLLED, AND BRASS-WARE.

[Includes Brass and copper tubing, (chiefly brass;) Brass foundry and finishing; Brass, rolled; and Brass-ware.]

[Continued from page 872.]

now attained to such dimensions, and has come to embrace so diversified and complicated interests, as to require peremptorily a system of statistical investigations substantially new, both as to the scope and the details of inquiry, and as to the methods and agencies of enumeration. Outgrown and ineffective as is the census law of 1850 in almost all particulars, it is nowhere so painfully and almost ludicrously inadequate as in the canvass of the national industry.

Of the total amount paid for the collection of the Statistics of Manufacture in "Schedule 4," more than a fifth was expended for returns relating to carpentering, blacksmithing, coopering, painting, plastering, and plumbing, not one of which industries, though far better returned than ever before, was reported with sufficient completeness even to furnish the data for a computation of the true production of the trade, so that, after this expenditure, one is still obliged to resort to the Tables of Occupations for the material from which to estimate the production of this group of industries. The money thus thrown away would have served, if placed under the control of the Department of the Interior for the salaries of experts and for the traveling expenses of special agents, to make the statistics of the larger industries complete and correct in the highest attainable degree, creditable to the census as a national work, and invaluable to the statesman, the political economist, and the practical man of business. At the same time, a well-trained statistician can, in a few hours, from the Tables of Occupations, reach a far more satisfactory result in respect to the products of the minor trades than is to be obtained by manipulating the partial returns of the trades themselves. In a word, the returns of manufactures should be restricted to those industries which are carried on in considerable establishments, and are susceptible of a thorough, complete, and detailed enumeration.

Second. The returns of manufactures, having been thus restricted, should be far more specific, and should be made to conform to the advance in the practical arts within the last twenty years, and to the requirements of modern statistical science. The additional facts thus to be elicited should not be industrial merely, but such also as are of social and sanitary importance. The Manufacturing Tables of the census ought to be so full of technical information as to become the hand-book of manufacturers, while, at the same time, they might be made so pregnant with truths important to the economist and the statesman as to become a hand-book of social and political philosophy. With no more authority of law than might have been contained in five lines of the statutes, and with not a dollar of expense above what has been incurred in making this unsatisfactory exhibit of the national industries, such an enumeration of the manufactures of the country might have been effected at the Ninth Census.

Third. The enumeration of all the manufacturing industries, which are of sufficient importance to be taken at all in the census, should be charged upon special agents or deputies, who should be in the widest sense experts, who should be liberally compensated; who should have ample authority to prosecute the stated inquiries of the census; and each of whom should be assigned to the enumeration of a single specific industry, or of a limited number of cognate industries, over a large extent of territory. To reduce the subjects of inquiry given each such agent, while extending his field of inquiry over entire cities, States, and sections, affords the true means of securing at once closeness of scrutiny and comprehensiveness of survey.

Fourth. The canvass of manufacturing industries should be conducted through means of schedules, special successively to each of the industries to be enumerated. This is demanded, not less for the convenience of the public than in the interest of the census itself, in order to accuracy and economy of enumeration.

At the census of 1860, the return of "kinds and quantities," both of materials and of products, required by the act of 1850, was enforced more or less completely in respect to each one of the 140,433 establishments enumerated;* while, in the case of only 6,336 establishments, (excluding, as in 1870, coal and iron mines,) were the returns of "kinds and quantities" tabulated. At the census of 1870, in the manifest uselessness and, indeed, impracticability of returning the kinds and quantities of materials or products in a form allowing of a systematic tabulation, the instructions to assistant marshals were so drawn as to excuse from this duty the proprietors of at least 115,000 establishments of productive industry. Eighty-five thousand and forty-two are published in one of the following tables, with the kinds and quantities of materials and products stated in detail. In respect to the remainder, the returns of "kinds and quantities" were not used, either from the inadequacy or irregularity of the statements made, or because the materials and products were found, upon an attempt at compilation, not to be of a character to repay the expense of tabulation, or to justify the space required in publication.

To increase the ratio of establishments in respect of which quantitative statements of materials and of products are supplied in the census, from $4\frac{1}{2}$ per cent., as in 1860,

*Exception must be made to the extent of 5,000 gold mines, in the State of California, which were estimated for at the Census Office.

The construction of the above table is wholly peculiar, as respects the relation between materials and products. This peculiarity of form is due to the desire of the Superintendent to exhibit the flouring interest proper of the country distinct from the custom-work of the ordinary "grist-mill." In reading this table it needs to be borne in mind that while the amount of grain specified under the head of materials embraces all that was ground for individual owners, as well as what was ground on the venture of the proprietors of mills, the amounts of flour, meal, &c., enumerated in the product only embrace the production of flouring as distinguished from grist mills. The difference between the amount of grain (of the several kinds) which would be required to produce the amounts of the several kinds of flour, meal, &c., specified in the product, and the total amount of grain actually reported under the head of materials, yields the quantity ground for individual owners. The statements respectively of the total value of materials and of the total value of the product include all grain ground, whether as custom-work or on personal venture, and, again, all flour, meal, &c., produced, whether for individual owners or otherwise. The table has been annotated according to this statement, but it has been apprehended that in a hasty use of the figures the caution conveyed by the notes might be overlooked. To repeat: The amount of grain specified under the head of materials includes all the work of all the grist and flouring mills returned in the census, and the value given is the value of all the materials consumed.

TABLE CIII.—*Manufactures: Special Statistics for Principal Industries—1870—Cont'd.*

NOTE.—In addition to the above products, California produced 243,700 bushels barley-meal; Maine, 1,282; Michigan, 3,375; New Jersey, 16,000; New York, 22,793; Ohio, 36,220; Utah, 400; Wisconsin, 9,000. Of hominy, Florida produced 3,000 bushels; Indiana, 41,250; Maryland, 22,110; New Jersey, 3,000; New York, 326,400; North Carolina, 31,200; Ohio, 40,790.

* Excluding flour, meal, &c., from grain ground for individual owners.

On the other hand, the amounts of the several kinds of flour, meal, &c., specified in the product only embrace the production of mills grinding for market; but the value given in the product covers the production of both classes of establishments. No such distinction as the above was attempted in the publications of the census of 1860, and the aines given, both for materials and products, therefore, embrace both classes of establishments. The fact that in a few States and Territories the number of mills exceeds the aggregate number of steam-engines and water-wheels returned, is due, firstly, to the use of wind-mills in some sections and the employment of horses for power in others; and, secondly, to the fact that in some of the Southern States a cane-mill and grist-mill frequently take their power from the same wheel. The latter is very generally the case in Louisiana. In South Carolina 22 flour-mills are returned as operated by horse-power; in Texas, 50 mills are returned as driven by horses, 17 by oxen, and 5 by wind. In addition to the products specified in the table, New York is returned as producing 11,550 bushels oat-meal, New Jersey 100,000 bushels, Vermont 8,500 bushels, Wisconsin 2,400 bushels.

* Under the general head of Tobacco in Table VIII (B) appear three specifications: "Tobacco and cigars;" "Tobacco, chewing and smoking, and snuff;" "Tobacco, cigars." For the purpose of Table X, the first class has been divided between the two remaining classes, so that the total production under the head of Tobacco, in Table X, is accounted for under the two heads of "Tobacco" and "Cigars."

This change involved the separation of the cigars produced in establishments whose main productions consisted of chewing or smoking tobacco. Thus the aggregate of the two classes, as by Table X, agree with the aggregate of the three classes, as by Table VIII (B.)

† Includes 8 establishments manufacturing cigarettes in Cameron County.

* Under the general head of Tobacco in Table VIII (B) appear three specifications: "Tobacco and cigars;" "Tobacco, chewing and smoking, and snuff;" "Tobacco, cigars." For the purposes of Table X, the first class has been divided between the two remaining classes, so that the total production under the head of Tobacco, in Table X, is accounted for under the two heads of "Tobacco" and "Cigars." This change involved the separation of the cigars produced in establishments whose main productions consisted of chewing or smoking tobacco. Thus the aggregate of the two classes, as by Table X, agree with the aggregate of the three classes, as by Table VIII (B.)

† Also, Tobacco, stemmed, strips, and dried leaf: United States, 2,497,600 pounds, \$379,000; Indiana, 944,600 pounds, \$73,390; Kentucky, 1,451,000 pounds, \$193,810; Tennessee, 102,000 pounds, \$11,800.

‡ The amounts of tobacco and snuff paying duty under the internal revenue acts, during the fiscal year ended June 30, 1870, were as follows: Of snuff, 1,168,070 pounds; of tobacco, chewing and other, 29,120,005 pounds. These amounts are inclusive of the quantities of the several articles imported, which were, for the same fiscal year—of snuff, 16,767 pounds; of tobacco, 5,981,863 pounds; leaving the amounts manufactured in the United States as follows: of snuff, 1,151,303 pounds; of tobacco, 83,138,142 pounds. The returns of the census for the year ended May 31, 1870, as will be seen above, exhibit a production of snuff, 2,867,191 pounds; of tobacco, 93,965,520 pounds.

to 34 per cent., as in 1870, may fairly be claimed as a marked success. But, to effect this object, an amount of clerical labor has been expended which has been simply enormous. Tens of thousands of letters from the Census Office were required to obtain the material for complete and comparative statements of production for the trades and branches of industry which are embraced in Table CIII of this Compendium.

The fatal defect of the "general blank" in this particular is, that each proprietor of establishment is left to fill out the columns, "kinds," "quantities," "values," twice—once for materials and once for products—according to his own judgment or inclination.

He has no idea how much particularity is desired, or how fully his neighbors and rivals in business will report their operations. If he really wishes to comply with the intentions of the law, he is at a loss to decide as to the best method of classifying the materials and products of his industry. The determination of this question, which is a matter for careful consideration by the best-informed statisticians, is thrown by turns upon each one of 250,000 manufacturers. No reasonable number of precise and specific questions could cause one-half the trouble which is involved in filling these

TABLE CV.—*The Statistics of Fisheries, exclusive of the Whale Fishery—1870.*

six columns of the general schedule of manufactures. A similar difficulty, though not proceeding to the same degree, is found in the return of power and machinery upon the general schedule.

The result of all this is, that some manufacturers, out of conscientiousness, or from a real interest in securing a complete and correct census of their industry, will make their answers even more full and explicit than is necessary; while others will put in as little as possible, disregarding, perhaps, the plainest and most natural divisions between the classes of products and materials. Each man's inclinations are thus made the measure of his duty, and uniformity of practice becomes impossible. Where there is no uniformity of practice, there can be no comparison and no tabulation of results. The alternative presented to the Census Office by returns of industry so irregular and confused, is either to drop the whole and accept the failure of the effort to obtain specific information of the highest economical and social value, or else, by a most extensive, laborious, and thankless correspondence, to elicit the information which would have been given as a matter of course, and without extra trouble to any one, on schedules specially adapted to the industries in the enumeration of which they were to be used.

For all this uncertainty, vexation, and confusion to enumerator, enumerated, and compiler, the special schedule offers a clear and easy remedy, substituting for the diverse judgments and inclinations of a thousand manufacturers a single straight rule by which all can govern themselves, knowing that they are doing all that will be required of them; a rule, too, which, by making compilation a mere work of transcription, would

save ten or twenty times more in clerical service than the trifling additional cost of printing involved.

For the treatment of the following topics affecting the Tables of Manufactures, see quarto Volume III, (Wealth and Industry,) Ninth Census :

	Page.
The scope of the statistics.....	371
Mode of collecting them.....	371
How it works.....	371
Efforts to supply omissions in returns.....	374
Actual loss from the tables of manufacturing production.....	375
Probable extent of loss.....	376
The period covered by the returns.....	377
Increase in manufactured productions for 1860 and 1870.....	377
The relation of materials to product.....	379
The relation of wages to product.....	381
Capital invested in manufactures.....	381
Establishments carrying on two or more distinct industries.....	382
Mining and the fisheries.....	383
